Recursion over Recursive Data Types

```
# type exp = VarExp of string | ConstExp of const
  | BinOpAppExp of bin_op * exp * exp
  | FunExp of string * exp | AppExp of exp * exp
```

- How to count the number of variables in an exp?

Mutually Recursive Functions

```
# let rec flatten_tree labtree =
    match labtree with TreeNode (x,treelist)
      -> x::flatten_tree_list treelist
    and flatten_tree_list treelist =
    match treelist with [] -> []

Mutually Recursive Functions

```
val flatten_tree : 'a labeled_tree -> 'a list =

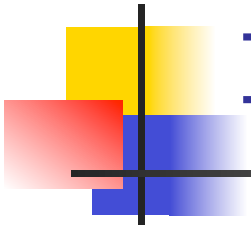
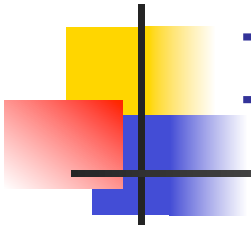
val flatten_tree_list : 'a labeled_tree list -> 'a
  list = <fun>
# flatten_tree ltree;;
- : int list = [5; 3; 2; 1; 7; 5]
```

- Nested recursive types lead to mutually recursive functions



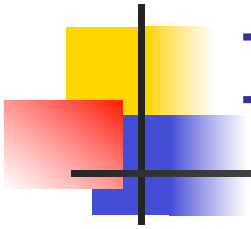
Infinite Recursive Values

```
# let rec ones = 1::ones;;
val ones : int list =
  [1; 1; 1; 1; ...]
# match ones with x::_ -> x;;
Characters 0-25:
Warning: this pattern-matching is not exhaustive.
Here is an example of a value that is not matched:
[]
  match ones with x::_ -> x;;
  ^^^^^^^^^^^^^^^^^^^^^^^^^
- : int = 1
```



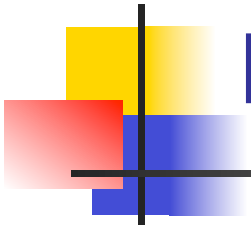
Infinite Recursive Values

```
# let rec lab_tree = TreeNode(2, tree_list)
    and tree_list = [lab_tree; lab_tree];;
val lab_tree : int labeled_tree =
  TreeNode (2, [TreeNode(...); TreeNode(...)])
val tree_list : int labeled_tree list =
  [TreeNode (2, [TreeNode(...);
   TreeNode(...)]);
   TreeNode (2, [TreeNode(...);
   TreeNode(...)])]
```



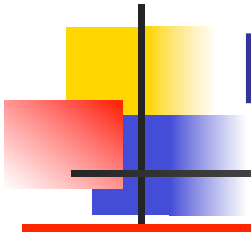
Infinite Recursive Values

```
# match lab_tree
    with TreeNode (x, _) -> x;;
- : int = 2
```



Records

- Records serve the same programming purpose as tuples
- Provide better documentation, more readable code
- Allow components to be accessed by label instead of position
  - Labels (aka *field names* must be unique)
  - Fields accessed by suffix dot notation

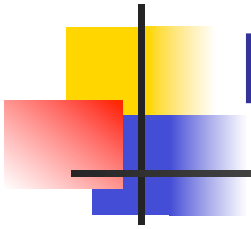


Record Types

- Record types must be declared before they can be used in OCaml

```
# type person = {name : string; ss : (int * int
  * int); age : int};;
type person = { name : string; ss : int * int *
  int; age : int; }
```

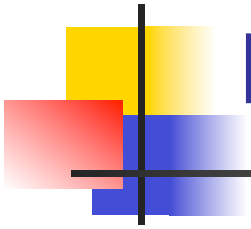
- person is the type being introduced
- name, ss and age are the labels, or fields



Record Values

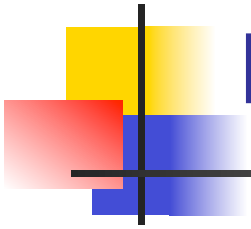
- Records built with labels; order does not matter

```
# let teacher = {name = "Elsa L. Gunter";
  age = 102; ss = (119,73,6244)};;
val teacher : person =
  {name = "Elsa L. Gunter"; ss = (119, 73,
   6244); age = 102}
```



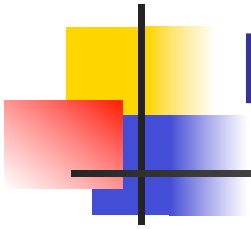
Record Pattern Matching

```
# let {name = elsa; age = age; ss =
  (_,_,s3)} = teacher;;
val elsa : string = "Elsa L. Gunter"
val age : int = 102
val s3 : int = 6244
```



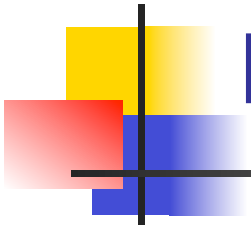
Record Field Access

```
# let soc_sec = teacher.ss;;
val soc_sec : int * int * int = (119,
  73, 6244)
```



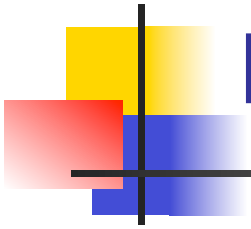
Record Values

```
# let student = {ss=(325,40,1276);
   name="Joseph Martins"; age=22};;
val student : person =
  {name = "Joseph Martins"; ss = (325, 40,
   1276); age = 22}
# student = teacher;;
- : bool = false
```



New Records from Old

```
# let birthday person = {person with age =
   person.age + 1};;
val birthday : person -> person = <fun>
# birthday teacher;;
- : person = {name = "Elsa L. Gunter"; ss =
   (119, 73, 6244); age = 103}
```



New Records from Old

```
# let new_id name soc_sec person =
 {person with name = name; ss = soc_sec};;
val new_id : string -> int * int * int -> person
   -> person = <fun>
# new_id "Guieseppe Martin" (523,04,6712)
   student;;
- : person = {name = "Guieseppe Martin"; ss
   = (523, 4, 6712); age = 22}
```
