HW 1 (Module 1-2)

This is a team activity (Total points: 50).

In 2014 in a large multicenter clinical trial, 1,893 people reported to have side effects when taking Abraxane. Among them, 25 people (1.32%) had renal failure. Consider the structure of Abraxane and utilize your knowledge from the previous modules and literature search to explain the reason behind this nephrotoxicity. What would you propose to address this problem?

Deadline: 02-28-2017

Suggested readings/resources: pubmed.com; SCOPUS, SciFinder

1. Please use pubmed.com as your source to find relevant literatures.
2. Restrict your answer to one page, single spaced, Arial, 12 points
3. Return hard copy in class (02/28)
