LECTURE 8: FINITE CARDINALITY AND INDUCTION

Date: September 18, 2019.

Sequences on A: Ordered list of elements from A.

- Length two sequences (a_1, a_2) , i.e., pairs, i.e., element of $A \times A$
- Length *n* sequences $(a_1, a_2, \dots, a_n) \in A \times A \times \dots \times A$

Bijective Functions:

- $f: A \to B$ is surjective/onto if range(f) = f(A) = B = codomain(f).
- $f: A \to B$ is injective/1-to-1 if distinct elements get mapped to distinct elements.
- A function is bijective if it is injective/1-to-1 and surjective/onto.

Cardinality (of finite sets): |X| = number of elements in X.

Example 1. $|\emptyset| = |\{0, 1, 2, 3\}| = |\{\mathbb{N}, \mathbb{Z}, \mathbb{Q}, \mathbb{R}\}| = |\{0, 1, 1, 2, 2\}| = |\{0, 1, 1, 2, 2\}| = |\{0, 1, 2\} \times \{a, b, c\}| = |\text{sequences of length } n \text{ over } \{0, 1, 2\}| = |\{0, 1, 2, 2\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 2, 3\}| = |\{0, 1, 3, 3\}| = |\{0, 1, 3, 3\}| = |\{0, 1, 3, 3\}| = |\{0, 1, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3, 3\}| = |\{1, 3, 3,$

Proposition 1. The following statements hold for finite sets A and B.

- 1. If there is a surjective function $f: A \to B$ then $|A| \ge |B|$.
- 2. If there is a injective function $f: A \to B$ then $|A| \leq |B|$.
- 3. If there is a bijective function $f : A \to B$ then |A| = |B|.

Proposition 2. For a set A such that |A| = n, $|pow(A)| = 2^n$.

Induction: To prove $\forall n \in \mathbb{N} \ P(n)$

- Prove P(0) [Base Case]
- Prove for all n > 0, if P(0) AND P(1) AND \cdots AND P(n-1) then P(n) [Induction Step]

Proposition 3. Prove for all $n \in \mathbb{N}$

$$1 + 2 + \dots + n = \frac{n(n+1)}{2}$$

Proposition 4. Prove that for all $n \in \mathbb{N}$, $\sum_{i=0}^{n} i2^i = (n-1)2^{n+1} + 2$.

Problem 1. All horses have the same color.

Proof by induction. Predicate P(n): Any set of *n*-horses has the same color. To prove: $\forall n \in \mathbb{N}$ with $n \ge 1$, P(n)

Base Case: P(1). In any set containing only one horse, all horses (namely the only one) have the same color.

Induction Hypothesis: Assume that $P(1), P(2), \ldots P(n-1)$ are true.

Induction Step: Consider an arbitrary set H of n + 1 horses.

Let $H = \{h_1, h_2, \dots, h_n\}$

Consider $H_1 = \{h_1, h_2, \dots, h_{n-1}\}$ and $H_2 = \{h_2, \dots, h_n\}$

Since P(n-1) holds, all horses in H_1 have the same color. Also all horses in H_2 have the same color. So $\operatorname{color}(h_1) = \operatorname{color}(h_2) = \operatorname{color}(h_3) = \cdots = \operatorname{color}(h_n)$. Hence all horses in H have the same color.
