CS 225
Data Structures

Feb. 25 – BST Balance
Wade Fagen-Ulmschneider, Craig Zilles
BST Analysis

Therefore, for all BST:

**Lower bound:** \( h \geq O( \lg(n) ) \)

**Upper bound:** \( h \leq O(n) \)
BST Analysis

The height of a BST depends on the order in which the data is inserted into it.

ex: 1 3 2 4 5 7 6  vs. 4 2 3 6 7 1 5
BST Analysis

Q: How many different ways are there to insert keys into a BST?

Q: What is the average height of all the arrangements?
## BST Analysis – Running Time

<table>

Height-Balanced Tree

What tree makes you happier?

Height balance: \[ b = \text{height}(T_R) - \text{height}(T_L) \]

A tree is height balanced if:
BST Rotation

We will perform a rotation that maintains two properties:

1.

2.
