## Data Structures

April 8-Graphs
Wade Fagen-Ulmschneider

## Graphs

## To study all of these structures:

1. A common vocabulary
2. Graph implementations
3. Graph traversals
4. Graph algorithms

HAMLET TROILUS AND CRESSIDA

## Graph Vocabulary

$$
\begin{aligned}
& G=(V, E) \\
& V \mid=n \\
& |V|=n
\end{aligned}
$$

$\mathrm{G}_{1}$

Incident Edges:
$1(v)=\{(x, v)$ in $E\}$
Degree(v): |I|
Adjacent Vertices:
$A(v)=\{x:(x, v)$ in $E\}$
Path $\left(G_{2}\right)$ : Sequence of vertices connected by edges

Cycle( $\mathrm{G}_{1}$ ): Path with a common begin and end vertex.

Simple Graph(G): A graph with no self loops or multi-edges.

## Graph Vocabulary

$$
\begin{aligned}
& G=(V, E) \\
& V \mid=n \\
& |V|=n
\end{aligned}
$$

$\mathrm{G}_{1}$

Subgraph(G):
$G^{\prime}=\left(V^{\prime}, E^{\prime}\right)$ :
$V^{\prime} \in V, E^{\prime} \in E$, and
$(u, v) \in E \rightarrow u \in V^{\prime}, v \in V^{\prime}$

Complete subgraph(G)
Connected subgraph(G)
Connected component(G)
Acyclic subgraph(G)
Spanning tree(G)

Running times are often reported by $\mathbf{n}$, the number of vertices, but often depend on $\mathbf{m}$, the number of edges.

How many edges? Minimum edges:
Not Connected:

## Connected*:

## Maximum edges:

Simple:
Not simple:

$$
\sum_{v \in v} \operatorname{deg}(v)=
$$

## Connected Graphs

O

## Proving the size of a minimally connected graph

Theorem:
Every minimally connected graph $\mathbf{G}=(\mathbf{V}, \mathbf{E})$ has $|\mathbf{V}|-\mathbf{1}$ edges.

Thm: Every minimally connected graph $\mathbf{G}=(\mathbf{V}, \mathrm{E})$ has $|\mathbf{V}|-\mathbf{1}$ edges.
Proof: Consider an arbitrary, minimally connected graph $\mathbf{G}=(\mathbf{V}, \mathrm{E})$.
Lemma 1: Every connected subgraph of $\mathbf{G}$ is minimally connected. (Easy proof by contradiction left for you.)

## Suppose $|\mathrm{V}|=1$ :

Definition: A minimally connected graph of 1 vertex has 0 edges.

Theorem: $|\mathrm{V}|-1$ edges $\rightarrow 1-1=0$.

Inductive Hypothesis: For any $\mathbf{j}<|\mathbf{V}|$, any minimally connected graph of $\mathbf{j}$ vertices has $\mathbf{j}$-1 edges.

## Suppose $|\mathrm{V}|>1$ :

1. Choose any vertex:
2. Partition:

Suppose $\mid$ V $\mid>1$ :
3. Count the edge
3. Count the edges

## Graph ADT

## Data:

- Vertices
- Edges
- Some data structure maintaining the structure between vertices and edges.

Functions:

- insertVertex(K key);
- insertEdge(Vertex v1, Vertex v2, K key);
- removeVertex(Vertex v);
- removeEdge(Vertex v1, Vertex v2);
- incidentEdges(Vertex v);
- areAdjacent(Vertex v1, Vertex v2);
- origin(Edge e);
- destination(Edge e);

## Graph Implementation: Edge List

Vertex Collection:

## Edge Collection:

## Graph Implementation: Edge List

 insertVertex(K key):
removeVertex(Vertex v):

## Graph Implementation: Edge List

incidentEdges(Vertex v):
areAdjacent(Vertex v1, Vertex v2):
G.incidentEdges (v1). contains (v2)

## Graph Implementation: Edge List

## Graph Implementation: Adjacency Matrix

 insertVertex(K key); removeVertex(Vertex v); areAdjacent(Vertex v1, Vertex v2); incidentEdges(Vertex v);|  | $\mathbf{u}$ | $\mathbf{v}$ | $\mathbf{w}$ | $\mathbf{z}$ |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{u}$ |  |  |  |  |
| $\mathbf{v}$ |  |  |  |  |
| $\mathbf{w}$ |  |  |  |  |
| $\mathbf{z}$ |  |  |  |  |
