CS 357 – Numerical Methods 1

Prof. Mariana Silva
Meeting Mariana

Teaching Associate Professor
Education Innovation Fellow
https://mfsilva.web.illinois.edu
mfsilva@illinois.edu

Research Area: Computers and Education
• Started teaching at UIUC Sp 2012
• Taught 10 different courses
• Teaching CS 357 since Sp 2018
My research interests

- Fostering collaborations and group work in the classroom

- Exploration of technological innovations for large-scale teaching
  - Drawing tools in PrairieLearn
  - Incorporate Jupyter notebooks in PrairieLearn workspaces
  - Integrate collaborative learning features in PrairieLearn
  - Developed web-tool to build teams
  - Training and mentoring for innovation and course design

- My most recent professional adventure
  - Co-founded PrairieLearn Inc in 2021
Meet Course Staff

CampusWire

• All communication will happen via CampusWire. NO EMAILS!

• Check it daily!

• Important course announcements will be pinned.
Office Hours

https://courses.engr.illinois.edu/cs357/pages/contact.html
More Course logistics

• Office hours start next week (via Zoom)

• Eating is NOT allowed in classroom. You must eat your lunch before or after class.

• Course Survey and Consent Form
Course Website - Syllabus

https://courses.engr.illinois.edu/cs357/pages/syllabus.html
PrairieLearn Content

• Lecture

• Workspaces

• Group Activity

• Homework

• Machine Problem

• Practice Quiz
Introduction and “Big Idea”
What are...

Numerical Methods?

- Mathematical model
  - “algorithms” derived from math ideas to solve equations numerically
- Complexity of the problem
  - Slow vs fast
- Accuracy
  - Accurate vs inaccurate

Method = Math + Complexity + Accuracy
Why is this course important?

1. Understanding and reconstruction of known problems
   - Natural disasters
   - Catastrophic failures

2. Prediction of unknown situations
   - Weather conditions
   - Behavior of new materials

3. Optimization of existing problems
   - Image recognition
   - Reduce fabrication costs

Explosion of Ariane 5 in 1996
Goals for this course

• Understand how numbers are represented in the computer.

• When developing code, you will likely run into numerical errors. What are the sources of these errors?

• How can you avoid numerical errors?

• How can you choose a suitable algorithm for a given application?

• Use existing libraries to solve real applications.
(Numerical) Method = Math + Complexity + Accuracy

Mathematical model:

What equations can we use to represent our problem?

Accuracy:

Are we getting accurate results?
Why is the method not giving me the correct solution?

Complexity:

How long does it take to solve this problem?
Is it cost-effective?
Your entire CS 357 semester in a few slides!

Are you ready?
Accuracy

• Why a numerical method might not give the right answer?

➢ Computers have finite representation of numbers
➢ Sometimes the “right answer” cannot be represented in a finite way
➢ Example:

\[ \pi = 3.1415926535897932384626433832795028841971… \]
Demo: Waiting for the number 1

```python
from time import sleep

x = 0.0

while x != 1.0:
    x += 0.1
    print(repr(x))

sleep(0.1)
```

What is going to happen when we run this code?
A. Code will stop after printing 11 values for x
B. Code will stop after printing 10 values for x
C. Code will not stop
D. Code will not start
Monte Carlo Methods

Texas Holdem Game: we would like to determine the probability of winning of a given starting hand

Physical experiment vs Numerical experiment
Numerical Experiments

• What do we want to know about a numerical experiment?
  1. What questions are we attempting to answer?
  2. What is the outcome of the experiment?
  3. Is it repeatable?
  4. Is the answer accurate?
  5. How long will it take?

**Time vs accuracy trade-off**

Question: Is running this method (with a certain accuracy) a good use of our time and/or computer resources?
Complexity

How long does it take to solve a problem?

Given $A$, $B$ matrices of size $m \times m$, the matrix-matrix multiplication $A \cdot B$ takes $\tau$ seconds.

How long does it take to perform $C \cdot D$, matrices of size $2m \times 2m$?

```python
from time import process_time
import numpy as np
def timer(n):
    A = np.random.randn(n,n)
    B = np.random.randn(n,n)
    t = process_time() # store the time
    C = A @ B
    t = process_time() - t
    print(t)

def timer2(n):
    A = np.random.randn(2*n,2*n)
    B = np.random.randn(2*n,2*n)
    t2 = process_time() # store the time
    C = A @ B
    t2 = process_time() - t2
    print(t2)
```
Linear system of equations: Image processing

How can we use linear operators to create blurred images? How can we do the inverse process?

Linear Least Squares

Dataset containing the characteristics of cells for several patients. Can we make predictions if cells are benign or malignant?
Principal component analysis

Sometimes our dataset has too many features? How can we reduce the feature space and still keep the most important information?
Second day of classes...
In-person support for section M students

1. Grainger Library
   - Two TAs will be at the room 404
   - Student groups should find tables/seats outside 404: main study area on the 4\textsuperscript{th} floor or any other location at Grainger

2. Siebel Basement
   - Two TAs will be at the Tutoring Center
   - Student groups should find tables/seats outside of tutoring center: open area of the basement and first floor

3. CIF 35 (~ 12 groups – first come basis)
Assessments

Learning Flow for each Module

1. Complete lectures on Tuesdays and Thursdays as they open
   • Get up to 100% credit by completing them before Tuesday 12pm of the week after they open
   • Get up to 80% credit by completing them before Tuesday midnight of the corresponding quiz week
   • Get up to 50% credit by completing them before last day of classes
2. Complete the Homework
   • Get up to 100% credit by completing them within one week after they open
   • Get up to 96% credit by completing them before Tuesday midnight of the corresponding quiz week
   • Get up to 50% credit by completing them before last day of classes
3. Complete MPs (when available) – similar deadline scheme as HW
4. For additional examples, look at the Demos (not for credit)

Practice Quizzes

1. You are encouraged to start the practice quizzes only after you complete the learning flow above
2. Complete at least one entire practice quiz as if you were taking the quiz (no access to resources, timed, etc). This will give you a good idea of how ready you are.
In general lectures and HWs will open at 8am Tuesdays and Thursdays.

Usually, Demos will open with the corresponding lectures (sometimes they will appear after the GA)

This will be the GA next Tuesday!
### Quiz 1: Modules 1-3

<table>
<thead>
<tr>
<th>PQ1</th>
<th>Practice Quiz 1: Linear Algebra + Python + Errors (NOT FOR CREDIT)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q1</td>
<td>Quiz 1: Linear Algebra + Python + Errors</td>
</tr>
</tbody>
</table>

### Module 3. Errors and Big-O

| L3 | Errors, Big-O notation, plots                                   |
| HW3| Errors and Big-O                                                |
| D3 | Demo: Errors                                                   |

### Module 2. Python

| L2 | Introduction to Python                                          |
| HW2| Introduction to Python                                          |
| D2 | Demo: Additional Python Tutorial                                |
| GA 1| Working with Python (NOT FOR CREDIT)                           |

### Module 1. Introduction

| L1 | Introduction to CS 357 (NOT FOR CREDIT)                        |
| HW1| Linear Algebra Review (NOT FOR CREDIT)                         |
| D1 | Demo: Intro to Numerical Methods                               |
| GA 0| Get started with GAs (NOT FOR CREDIT)                          |
| GA00| Workspaces for collaborative learning (NOT FOR CREDIT)         |
# L2: Introduction to Python

<table>
<thead>
<tr>
<th>Question</th>
<th>Value</th>
<th>History</th>
<th>Awarded points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-guided notebook (no pre-recorded video)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>L2.1. Prerequisite survey</td>
<td>1</td>
<td></td>
<td>0/1</td>
</tr>
<tr>
<td>L2.2. Python intro - self-guided notebook</td>
<td>1</td>
<td></td>
<td>0/1</td>
</tr>
</tbody>
</table>

Open the workspace below and complete the IPython notebook.

Select one of the answers below (there is no correct answer):

- (a) I completed the notebook, and I found it helpful.
- (b) I completed the notebook, but I did not find it helpful.
- (c) I did not complete the notebook because I already know how to use Python.
- (d) I did not complete the notebook (for other reasons).
For the Mock GA today, you will need to:
- Define Python variables
- Define 1d numpy array
- Perform simple operations with numpy arrays
Quiz Schedule

If you are supposed to take the quiz at CBTF

<table>
<thead>
<tr>
<th>Action</th>
<th>Exam</th>
<th>First date</th>
<th>Last date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Make a reservation</td>
<td>CS 357 (Sp23): Quiz 1</td>
<td>2023-01-30 00:01:00 (CST)</td>
<td>2023-02-01 23:59:00 (CST)</td>
</tr>
</tbody>
</table>

If you are supposed to take the quiz online with Zoom proctoring

<table>
<thead>
<tr>
<th>Exam</th>
<th>Date</th>
<th>Duration</th>
<th>Type</th>
<th>Location</th>
<th>Accommodations</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 357 (Sp23): Quiz 1</td>
<td>2023-02-02 12:30:00 (CST)</td>

<td>Online</td>
<td>Zoom</td>
<td>—</td>
</tr>
</tbody>
</table>

Do not register right now! I will be creating the groups this weekend!
Do you know who Bob Marley is?
Consider studying abroad!
Complexity

Given A, B matrices of size $300 \times 300$, the matrix-matrix multiplication $A \cdot B$ takes 2 seconds.

How long does it take to perform $C \cdot D$, matrices of size $3000 \times 3000$?
Collaborative Learning

• Complete weekly activity in groups

• Week 1 and 2: randomly assigned groups via Zoom

• Week 3-8: fixed groups

• Week 9-14: fixed groups
We will use the results of this survey to create the groups for at least the first half of the semester (GA2-7). We will give students the opportunity to change groups in the second half of the semester.

If you know 2-3 other students taking CS 357 this semester, and you have agreed to complete the group activities together, you can request to be placed in the same group.

To submit this request, your group must select a group name, so that all members can submit the same answer below:

In the entry field below, enter your group's selection for the **group name**.

**group name:**

**Important notes:**

- Every student that enters the same group name will be placed in the same group.
- Make sure you agree on a creative and **unique group name**. For example, you can use the members last names combined. You don't want to be placed in the wrong group by mistake.
- **Groups must have 2-3 students.** If more than 3 students or less than 2 students submit this request using the same group name, ALL these students will be placed in groups at random!
- **Groups can only be formed with students registered in the same section.**

Students who do not submit this survey will be placed at a group at random. Students who are assigned to a random group in section N (online) must attend the Zoom meeting at 12:30pm at least during week 3 (they will be able to make other arrangements at that time).

If you change your mind, you can enter other submissions (by clicking "Save & Grade") until this survey deadline on Friday of week 2. The last submitted answer will be the one used to form the groups. Make sure you triple-check your submission with the other group members!

Save & Grade  Save only  New variant

If you are selecting a group, how did you

- (a) Knew group member(s) prior to talk
- (b) Met group member(s) during first lab
- (c) Found group member(s) through class announcements
- (d) Found group member(s) through other group work
- (e) Found group member(s) through other means
- (f) Other

Select all possible options that apply.
Creating a group assessment in PL
