Give regular expressions for each of the following languages over the alphabet $\{0, 1\}$.

- 1. All strings containing the substring 000.
- 2. All strings *not* containing the substring **000**.
- 3. All strings in which every run of 0s has length at least 3.
- 4. All strings in which 1 does not appear after a substring 000.
- 5. All strings containing at least three 0s.
- 6. Every string except 000. [Hint: Don't try to be clever.]

Work on these later:

- 7. All strings w such that in every prefix of w, the number of 0s and 1s differ by at most 1.
- *8. All strings containing at least two 0s and at least one 1.
- *9. All strings w such that in every prefix of w, the number of 0s and 1s differ by at most 2.
- **★**10. All strings in which the substring 000 appears an even number of times. (For example, 0001000 and 0000 are in this language, but 00000 is not.)
