

## 16.4.2

DFS and cycle detection:

Topological sorting using DFS

DFS

DFS

## Cycles in graphs

**Question:** Given an undirected graph how do we check whether it has a cycle and output one if it has one?

**Question:** Given an directed graph how do we check whether it has a cycle and output one if it has one?

## Cycles in graphs

**Question:** Given an undirected graph how do we check whether it has a cycle and output one if it has one?

**Question:** Given an directed graph how do we check whether it has a cycle and output one if it has one?

# Cycle detection in directed graph using topological sorting

## Question

Given  $G$ , is it a **DAG**?

If it is, compute a topological sort.

If it fails, then output the cycle  $C$ .

# Topological sort a graph using DFS...

And detect a cycle in the process

**DFS** based algorithm:

- 1 Compute **DFS**( $G$ )
  - 2 If there is a back edge  $e = (v, u)$  then  $G$  is not a **DAG**. Output cycle  $C$  formed by path from  $u$  to  $v$  in  $T$  plus edge  $(v, u)$ .
  - 3 Otherwise output nodes in decreasing post-visit order. **Note:** no need to sort, **DFS**( $G$ ) can output nodes in this order.
- 

Computes topological ordering of the vertices.

Algorithm runs in  $O(n + m)$  time.

Correctness is not so obvious. See next two propositions.

# Back edge and Cycles

## Proposition

$G$  has a cycle  $\iff$  there is a back-edge in **DFS**( $G$ ).

## Proof.

If:  $(u, v)$  is a back edge implies there is a cycle  $C$  consisting of the path from  $v$  to  $u$  in **DFS** search tree and the edge  $(u, v)$ .

Only if: Suppose there is a cycle  $C = v_1 \rightarrow v_2 \rightarrow \dots \rightarrow v_k \rightarrow v_1$ .

Let  $v_i$  be first node in  $C$  visited in **DFS**.

All other nodes in  $C$  are descendants of  $v_i$  since they are reachable from  $v_i$ .

Therefore,  $(v_{i-1}, v_i)$  (or  $(v_k, v_1)$  if  $i = 1$ ) is a back edge. □

## Decreasing post numbering is valid

### Proposition

If  $G$  is a DAG and  $\text{post}(v) > \text{post}(u)$ , then  $(u \rightarrow v)$  is not in  $G$ .

### Proof.

Assume  $\text{post}(u) < \text{post}(v)$  and  $(u \rightarrow v)$  is an edge in  $G$ . One of two holds:

- Case 1:  $[\text{pre}(u), \text{post}(u)]$  is contained in  $[\text{pre}(v), \text{post}(v)]$ .
- Case 2:  $[\text{pre}(u), \text{post}(u)]$  is disjoint from  $[\text{pre}(v), \text{post}(v)]$ .

## Decreasing post numbering is valid

### Proposition

If  $G$  is a DAG and  $\text{post}(v) > \text{post}(u)$ , then  $(u \rightarrow v)$  is not in  $G$ .

### Proof.

Assume  $\text{post}(u) < \text{post}(v)$  and  $(u \rightarrow v)$  is an edge in  $G$ . One of two holds:

- Case 1:  $[\text{pre}(u), \text{post}(u)]$  is contained in  $[\text{pre}(v), \text{post}(v)]$ .
- Case 2:  $[\text{pre}(u), \text{post}(u)]$  is disjoint from  $[\text{pre}(v), \text{post}(v)]$ .

## Decreasing post numbering is valid

### Proposition

If  $G$  is a DAG and  $\text{post}(v) > \text{post}(u)$ , then  $(u \rightarrow v)$  is not in  $G$ .

### Proof.

Assume  $\text{post}(u) < \text{post}(v)$  and  $(u \rightarrow v)$  is an edge in  $G$ . One of two holds:

- **Case 1:**  $[\text{pre}(u), \text{post}(u)]$  is contained in  $[\text{pre}(v), \text{post}(v)]$ . Implies that  $u$  is explored during  $\text{DFS}(v)$  and hence is a descendent of  $v$ . Edge  $(u, v)$  implies a cycle in  $G$  but  $G$  is assumed to be DAG!
- **Case 2:**  $[\text{pre}(u), \text{post}(u)]$  is disjoint from  $[\text{pre}(v), \text{post}(v)]$ . This cannot happen since  $v$  would be explored from  $u$ .

# Translation

We just proved:

## Proposition

*If  $G$  is a DAG and  $\text{post}(v) > \text{post}(u)$ , then  $(u \rightarrow v)$  is not in  $G$ .*

$\implies$  sort the vertices of a DAG by decreasing post numbering in decreasing order, then this numbering is valid.

# Topological sorting

## Theorem

$G = (\mathbf{V}, \mathbf{E})$ : Graph with  $n$  vertices and  $m$  edges.

Compute a topological sorting of  $G$  using **DFS** in  $O(n + m)$  time.

That is, compute a numbering  $\pi : \mathbf{V} \rightarrow \{1, 2, \dots, n\}$ , such that

$$(u \rightarrow v) \in E(G) \implies \pi(u) < \pi(v).$$

# Example
