Problem 1. [Category: Design]

2. Now suppose $A[1..n]$ is a sorted array of $n$ distinct positive integers. Describe an even faster algorithm that either computes an index $i$ such that $A[i] = i$ or correctly reports that no such index exists. Hint: This is really easy.

Problem 3. [Category: Design]

1. Suppose you are given two sorted arrays $A[1..n]$ and $B[1..n]$ containing distinct integers. Describe a fast algorithm to find the median (meaning the $n$th smallest element) of the union $A \cup B$.

2. Now suppose you are given two sorted arrays $A[1..m]$ and $B[1..n]$ and an integer $k$. Describe a fast algorithm to find the $k$th smallest element in the union $A \cup B$.
