Give regular expressions for each of the following languages over the alphabet $\{0, 1\}$.

- All strings containing the substring 000.
 Solution: (0+1)*000(0+1)*
- 2 All strings *not* containing the substring 000.

```
Solution: (1 + 01 + 001)^*(\varepsilon + 0 + 00)
```

```
Solution: (\varepsilon + 0 + 00)(1(\varepsilon + 0 + 00))^*
```

3 All strings in which every run of 0s has length at least 3.

Solution: $(1 + 0000^*)^*$

Solution: $(\varepsilon + 1)((\varepsilon + 0000^*)1)^*(\varepsilon + 0000^*)$

- 4 All strings in which 1 does not appear after a substring 000.
 Solution: (1 + 01 + 001)*0*
- 5 All strings containing at least three 0s.

Solution: $(0+1)^*0(0+1)^*0(0+1)^*0(0+1)^*$ Solution: $1^*01^*0(0+1)^*$ or $(0+1)^*01^*01^*01^*$

6 Every string except 000. (**Hint:** Don't try to be clever.)

Solution: Every string $w \neq 000$ satisfies one of three conditions: Either |w| < 3, or |w| = 3 and $w \neq 000$, or |w| > 3. The first two cases include only a finite number of strings, so we just list them explicitly. The last case includes *all* strings of length at least 4.

arepsilon + 0 + 1 + 00 + 01 + 10 + 11+ 001 + 010 + 011 + 100 + 101 + 110 + 111 + (1 + 0)(1 + 0)(1 + 0)(1 + 0)(1 + 0)*

Solution: $\varepsilon + 0 + 00 + (1 + 01 + 001 + 000(1 + 0))(1 + 0)^*$

7 All strings w such that in every prefix of w, the number of 0s and 1s differ by at most 1.
Solution: Equivalently, strings that alternate between 0s and 1s: (01 + 10)*(ε + 0 + 1)

8 (Hard.) All strings containing at least two 0s and at least one 1.
Solution: There are three possibilities for how such a string can begin:

- Start with 00, then any number of 0s, then 1, then anything.
- Start with 01, then any number of 1s, then 0, then anything.
- Start with 1, then a substring with exactly two 0s, then anything.

All together: $000^*1(0+1)^* + 011^*0(0+1)^* + 11^*01^*0(0+1)^*$ Or equivalently: $(000^*1 + 011^*0 + 11^*01^*0)(0+1)^*$

Solution:

There are three possibilities for how the three required symbols are ordered:

- Contains a 1 before two 0s: $(0+1)^* 1 (0+1)^* 0 (0+1)^* 0 (0+1)^*$
- Contains a 1 between two 0s: $(0+1)^* 0 (0+1)^* 1 (0+1)^* 0 (0+1)^*$
- Contains a 1 after two 0s: $(0+1)^* 0 (0+1)^* 0 (0+1)^* 1 (0+1)^*$

So putting these cases together, we get the following:

 $\begin{array}{l} (0+1)^* \, 1 \, (0+1)^* \, 0 \, (0+1)^* \, 0 \, (0+1)^* \\ + \, (0+1)^* \, 0 \, (0+1)^* \, 1 \, (0+1)^* \, 0 \, (0+1)^* \\ + \, (0+1)^* \, 0 \, (0+1)^* \, 0 \, (0+1)^* \, 1 \, (0+1)^* \end{array}$

Solution: $(0+1)^* (101^*0 + 010 + 01^*01) (0+1)^*$

9 (Hard.) All strings w such that in every prefix of w, the number of 0s and 1s differ by at most 2. Solution: $(0(01)^*1 + 1(10)^*0)^* \cdot (\varepsilon + 0(01)^*(0 + \varepsilon) + 1(10)^*(1 + \varepsilon))$

10 (Really hard.) All strings in which the substring 000 appears an even number of times. (For example, 0001000 and 0000 are in this language, but 00000 is not.)

Solution: Every string in $\{0,1\}^*$ alternates between (possibly empty) blocks of 0s and individual 1s; that is, $\{0,1\}^* = (0^*1)^*0^*$. Trivially, every 000 substring is contained in some block of 0s. Our strategy is to consider which blocks of 0s contain an even or odd number of 000 substrings.

Let X denote the set of all strings in 0^* with an even number of 000 substrings. We easily observe that $X = \{0^n \mid n = 1 \text{ or } n \text{ is even}\} = 0 + (00)^*$.

Let Y denote the set of all strings in 0^* with an *odd* number of 000 substrings. We easily observe that $Y = \{0^n \mid n > 1 \text{ and } n \text{ is odd}\} = 000(00)^*$.

We immediately have $0^* = X + Y$ and therefore $\{0, 1\}^* = ((X + Y)1)^*(X + Y)$.

Finally, let L denote the set of all strings in $\{0,1\}^*$ with an even number of 000 substrings. A string $w \in \{0,1\}^*$ is in L if and only if an odd number of blocks of 0s in w are in Y; the remaining blocks of 0s are all in X.

$$L = ((X1)^*Y1 \cdot (X1)^*Y1)^* (X1)^*X$$

Plugging in the expressions for X and Y gives us the following regular expression for L:

$$\left(\left((0+(00)^*)1\right)^*\cdot 000(00)^*1\cdot \left((0+(00)^*)1\right)^*\cdot 000(00)^*1\right)^*\cdot \left((0+(00)^*)1\right)^*\cdot (0+(00)^*)$$

Whew!
