## Last Time:

strings

languages

ops on languages:

- union, intersection, complement

- concatenation

$$L_1 L_2 = \{xy : x \in L_1, y \in L_2\}$$

- Kleene star

$$L^* = \bigcup_{i=0}^{\infty} L^i$$

## Regular Languages

all langs obtainable from union, concat, star  
(starting from trivial base cases)

Formal Def'n by induction

(i)  $\emptyset$ ,  $\{\epsilon\}$ ,  $\{a\}$  are regular langs  $\forall a \in \Sigma$

(ii) if  $L_1, L_2$  are regular langs,  
then so are  $L_1 \cup L_2$ ,  $L_1 L_2$ , and  $L_1^*$

(only langs obtained by finite # appl'ns of (i), (ii)  
are regular)

Ex  $\Sigma = \{0, 1\}$

a)  $\{1001\}$  is regular

$$= \{1\} \cdot \{0\} \cdot \{0\} \cdot \{1\}$$

b)  $\{1001, 10, 1\}$  is regular

$$= \{1\} \cdot \{0\} \cdot \{0\} \cdot \{1\} \cup \{1\} \cdot \{0\} \cup \{1\}$$

c) all finite langs are regular.

$$\begin{aligned} \text{d) } & \{x \in \{0,1\}^* : |x| \text{ is } \underline{\text{odd}}\} \text{ is regular} \\ & = \{00, 01, 10, 11\}^* \cdot \{0, 1\} \\ & = \left( (\{0\} \cup \{1\}) \cdot (\{0\} \cup \{1\}) \right)^* \cdot \{0, 1\} \end{aligned}$$

⋮

Notation regular expressions

(i)  $\phi, \varepsilon, a$  are regular expr for  $\phi, \{\varepsilon\}, \{a\}$   
 $b, a \in \Sigma$

(ii) if  $r_1, r_2$  are regular exprs for  $L_1, L_2$  resp,  
 then  $(r_1 + r_2)$  is reg expr for  $L_1 \cup L_2$   
 $(r_1, r_2)$  " "  $L_1 L_2$   
 $(r_1^*)$  " "  $L_1^*$

Let  $L(r)$  denote lang corresponding to expr  $r$ .

Ex (d)  $((0+1)(0+1))^* (0+1)$

Remk: - omit unnecessary parentheses  
 precedence order:  $*$ ,  $\cdot$ ,  $+$

- shorthand:  $r^+ = r \cdot r^*$  (one or more occurrence)

- a lang may have many diff. reg expr

e.g.  $(0+1) \cdot ((0+1)(0+1))^*$   
 $(0+1) (00+01+10+11)^*$

Ex ( $\Sigma = \{0, 1\}$ )

a) all strings with 00 as a substring

$$\Rightarrow \underline{(0+1)^* 00 (0+1)^*}$$

b) all strings with 00 as a substring  $\leftarrow$   
and having even length  $\leftarrow$

2 cases: (i) part before 00: even  $\leftarrow$  even  
 part after 00: even  $\leftarrow$  odd  
 (ii) part before 00: odd  
 part after 00: odd

$$\boxed{\begin{aligned} & ((0+1)(0+1))^* 00 ((0+1)(0+1))^* \\ + & ((0+1)(0+1))^* (0+1) 00 ((0+1)(0+1))^* (0+1) \end{aligned}}$$

c) all strings with even # of 0's

~~$(00)^*$~~

$$\underline{(1^* 0 1^* 0 1^*)^*} + \underline{1^*}$$

or  $(1^* 0 1^* 0)^* 1^*$   ~~$1^*$~~

or  $1^* (0 1^* 0 1^*)^*$   ~~$(1^* 0 1^* 0)^*$~~

d) all strings not beginning with 00  $\leftarrow$

~~$00 (0+1)^*$~~

cases: begin with 1  $\checkmark$   
 or begin with 01  $\checkmark$

boundary case:  
 $\epsilon, 0$

$\dots^* \dots$

or begin...

$$\begin{aligned} & \underline{1(0+1)^*} + 01(0+1)^* + \epsilon + 0 \\ & = (1+01)(0+1)^* + \epsilon + 0 \end{aligned}$$

e) all strings not containing 00 as a substring

$$\underline{(1+01)^* (\epsilon+0)}$$

$$\begin{aligned} & (1+01)^* \\ & + (1+01)^* 0 \end{aligned}$$

$$= (1^* + 01^*)^* (\epsilon + 0)$$

$$\underline{1111011110\dots} = (\epsilon+0) \cdot \underline{(1^*0)^*} \underline{1^*}$$

f) all strings with even # of 0's  
and even # of 1's

idea - divide into blocks of two

~~00~~   01   10   ~~11~~  
 ↑     ↑     ↓  
 # such blocks  
 must be even

(# of 01 & 10 blocks) is even.

$$\underline{\left( (00+11)^* (01+10) (00+11)^* (01+10) (00+11)^* \right)^* + (00+11)^*}$$

or  $(00+11)^* (01+10) (00+11)^* (01+10) (00+11)^*$

$L^*$ :  $\boxed{\epsilon L} \boxed{\epsilon L} \boxed{\epsilon L} \boxed{\epsilon L}$   
 0000

g) all strings with even # 0's  
and # 1's div by 5  
and not containing 01101

hard but possible! ↗

h)  $\{0^i 1^i : i \geq 0\}$

~~$L^*$~~

→ impossible!! (how to prove it?)

### Some identities

$$L((r_1 + r_2) \cdot r_3) = L(r_1 r_3 + r_2 r_3)$$

$$L((r^*)^*) = L(r^*)$$

$$L((rs)^* r) = L(r(sr)^*)$$

$$L((r+s)^*) = L((r^* + s^*)^*)$$

$$= L((r^* s^*)^*)$$

don't memorize!

⋮
