Based in part on slides by Mattox Beckman, as updated by Vikram Adve and Gul Agha

10/16/08

1

Grammars

- Grammars are formal descriptions of which strings over a given character set are in a particular language
- Language designers write grammar
- Language implementers use grammar to know what programs to accept
- Language users use grammar to know how to write legitimate programs

10/16/08

2

Types of Formal Language Descriptions

- Regular expressions, regular grammars
- Context-free grammars, BNF grammars, syntax diagrams
- Finite state automata

- Whole family more of grammars and automata – covered in automata theory

10/16/08

3

Sample Grammar

- Language: Parenthesized sums of 0's and 1's

- $\langle \text{Sum} \rangle ::= 0$
- $\langle \text{Sum} \rangle ::= 1$
- $\langle \text{Sum} \rangle ::= \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
- $\langle \text{Sum} \rangle ::= (\langle \text{Sum} \rangle)$

10/16/08

4

BNF Grammars

- Start with a set of characters, **a,b,c,...**
 - We call these *terminals*
- Add a set of different characters, **X,Y,Z,...**
 - We call these *nonterminals*
- One special nonterminal **S** called *start symbol*

10/16/08

5

BNF Grammars

- BNF rules (aka *productions*) have form
$$\mathbf{X} ::= y$$
where **X** is any nonterminal and *y* is a string of terminals and nonterminals
- BNF *grammar* is a set of BNF rules such that every nonterminal appears on the left of some rule

10/16/08

6

Sample Grammar

- Terminals: 0 1 + ()
- Nonterminals: <Sum>
- Start symbol = <Sum>
- <Sum> ::= 0
- <Sum> ::= 1
- <Sum> ::= <Sum> + <Sum>
- <Sum> ::= (<Sum>)
- Can be abbreviated as
<Sum> ::= 0 | 1
 | <Sum> + <Sum> | (<Sum>)

10/16/08

7

BNF Derivations

- Given rules

$$\mathbf{X} ::= y\mathbf{Z}w \text{ and } \mathbf{Z} ::= v$$

we may replace \mathbf{Z} by v to say

$$\mathbf{X} \Rightarrow y\mathbf{Z}w \Rightarrow yvw$$

- Sequence of such replacements called *derivation*
- Derivation called *right-most* if always replace the right-most non-terminal

10/16/08

8

BNF Derivations

- Start with the start symbol:

<Sum> =>

10/16/08

9

BNF Derivations

- Pick a non-terminal

<Sum> =>

10/16/08

10

BNF Derivations

- Pick a rule and substitute:
 - <Sum> ::= <Sum> + <Sum>
- <Sum> => <Sum> + <Sum>

10/16/08

11

BNF Derivations

- Pick a non-terminal:

<Sum> => <Sum> + <Sum>

10/16/08

12

BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= (\langle \text{Sum} \rangle)$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

13

BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

14

BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

15

BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

16

BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= 1$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

17

BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle \\ &\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle\end{aligned}$$

10/16/08

18

BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= 0$

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + 0$

10/16/08

19

BNF Derivations

- Pick a non-terminal:

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + 0$

10/16/08

20

BNF Derivations

- Pick a rule and substitute

- $\langle \text{Sum} \rangle ::= 0$

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) 0$
 $\Rightarrow (0 + 1) + 0$

10/16/08

21

BNF Derivations

- $(0 + 1) + 0$ is generated by grammar

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + \langle \text{Sum} \rangle$
 $\Rightarrow (\langle \text{Sum} \rangle + 1) + 0$
 $\Rightarrow (0 + 1) + 0$

10/16/08

22

$\langle \text{Sum} \rangle ::= 0 \mid 1 \mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \mid (\langle \text{Sum} \rangle)$

$\langle \text{Sum} \rangle \Rightarrow$

10/16/08

23

BNF Semantics

- The meaning of a BNF grammar is the set of all strings consisting only of terminals that can be derived from the Start symbol

10/16/08

24

Extended BNF Grammars

- Alternatives: allow rules of form $X ::= y/z$
 - Abbreviates $X ::= y, X ::= z$
- Options: $X ::= y[v]z$
 - Abbreviates $X ::= yvz, X ::= yz$
- Repetition: $X ::= y\{v\}^*z$
 - Can be eliminated by adding new nonterminal V and rules $X ::= yz, X ::= yVz, V ::= v, V ::= w$

10/16/08

25

Regular Grammars

- Subclass of BNF
- Only rules of form $\langle \text{nonterminal} \rangle ::= \langle \text{terminal} \rangle \langle \text{nonterminal} \rangle$ or $\langle \text{nonterminal} \rangle ::= \langle \text{terminal} \rangle$
- Defines same class of languages as regular expressions
- Important for writing lexers (programs that convert strings of characters into strings of tokens)

10/16/08

26

Example

- Regular grammar:
 - $\langle \text{Balanced} \rangle ::= \epsilon$
 - $\langle \text{Balanced} \rangle ::= 0 \langle \text{OneAndMore} \rangle$
 - $\langle \text{Balanced} \rangle ::= 1 \langle \text{ZeroAndMore} \rangle$
 - $\langle \text{OneAndMore} \rangle ::= 1 \langle \text{Balanced} \rangle$
 - $\langle \text{ZeroAndMore} \rangle ::= 0 \langle \text{Balanced} \rangle$
- Generates even length strings where every initial substring of even length has same number of 0's as 1's

10/16/08

27

Parse Trees

- Graphical representation of derivation
- Each node labeled with either non-terminal or terminal
- If node is labeled with a terminal, then it is a leaf (no sub-trees)
- If node is labeled with a non-terminal, then it has one branch for each character in the right-hand side of rule used to substitute for it

10/16/08

28

Example

- Consider grammar:
 - $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle$
 - | $\langle \text{factor} \rangle + \langle \text{factor} \rangle$
 - $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle$
 - | $\langle \text{bin} \rangle * \langle \text{exp} \rangle$
 - $\langle \text{bin} \rangle ::= 0 \mid 1$
- Problem: Build parse tree for $1 * 1 + 0$ as an $\langle \text{exp} \rangle$

10/16/08

29

Example cont.

- $1 * 1 + 0: \langle \text{exp} \rangle$

$\langle \text{exp} \rangle$ is the start symbol for this parse tree

10/16/08

30

Example cont.

Use rule: $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle$

10/16/08

31

Example cont.

Use rule: $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle * \langle \text{exp} \rangle$

10/16/08

32

Example cont.

Use rules: $\langle \text{bin} \rangle ::= 1$ and
 $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle + \langle \text{factor} \rangle$

10/16/08

33

Example cont.

Use rule: $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle$

10/16/08

34

Example cont.

Use rules: $\langle \text{bin} \rangle ::= 1 \mid 0$

10/16/08

35

Example cont.

Fringe of tree is string generated by grammar

10/16/08

36

Your Turn: $1 * 0 + 0 * 1$

10/16/08

37

Parse Tree Data Structures

- Parse trees may be represented by SML datatypes
- One datatype for each nonterminal
- One constructor for each rule
- Defined as mutually recursive collection of datatype declarations

10/16/08

38

Example

- Recall grammar:
 $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle \mid \langle \text{factor} \rangle + \langle \text{factor} \rangle$
 $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle \mid \langle \text{bin} \rangle * \langle \text{exp} \rangle$
 $\langle \text{bin} \rangle ::= 0 \mid 1$
- datatype exp = Factor2Exp of factor
 | Plus of factor * factor
 and factor = Bin2Factor of bin
 | Mult of bin * exp
 and bin = Zero | One

10/16/08

39

Example cont.

10/16/08

40

Example cont.

- Can be represented as

```
Factor2Exp
(Mult(One,
      Plus(Bin2Factor One,
            Bin2Factor Zero)))
```

10/16/08

41

Ambiguous Grammars and Languages

- A BNF grammar is *ambiguous* if its language contains strings for which there is more than one parse tree
- If all BNF's for a language are ambiguous then the language is *inherently ambiguous*

10/16/08

42

Example: Ambiguous Grammar

0 + 1 + 0

10/16/08

43

Example

What is the result for:

$$3 + 4 * 5 + 6$$

10/16/08

44

Example

What is the result for:

$$3 + 4 * 5 + 6$$

Possible answers:

- 41 = ((3 + 4) * 5) + 6
- 47 = 3 + (4 * (5 + 6))
- 29 = (3 + (4 * 5)) + 6 = 3 + ((4 * 5) + 6)
- 77 = (3 + 4) * (5 + 6)

10/16/08

45

Example

What is the value of:

$$7 - 5 - 2$$

10/16/08

46

Example

What is the value of:

$$7 - 5 - 2$$

Possible answers:

- In Pascal, C++, SML assoc. left
 $7 - 5 - 2 = (7 - 5) - 2 = 0$
- In APL, associate to right
 $7 - 5 - 2 = 7 - (5 - 2) = 4$

10/16/08

47

Two Major Sources of Ambiguity

- Lack of determination of operator precedence
- Lack of determination of operator associativity
- Not the only sources of ambiguity

10/16/08

48

How to Enforce Associativity

- Have at most one recursive call per production
- When two or more recursive calls would be natural leave right-most one for right associativity, left-most one for left associativity

10/16/08

49

Example

- $\langle \text{Sum} \rangle ::= 0 \mid 1 \mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \mid (\langle \text{Sum} \rangle)$
- Becomes
 - $\langle \text{Sum} \rangle ::= \langle \text{Num} \rangle \mid \langle \text{Num} \rangle + \langle \text{Sum} \rangle$
 - $\langle \text{Num} \rangle ::= 0 \mid 1 \mid (\langle \text{Sum} \rangle)$

10/16/08

50

Operator Precedence

- Operators of highest precedence evaluated first (bind more tightly).
- Precedence for infix binary operators given in following table
- Needs to be reflected in grammar

10/16/08

51

Precedence Table - Sample

	Fortran	Pascal	C/C++	Ada	SML
highest	**	*, /, div, mod	++, --	**	div, mod, /, *
	*, /	+, -	*, /, %	*, /, mod	+, -, ^
	+, -		+, -	+, -	::

10/16/08

52

First Example Again

- In any above language, $3 + 4 * 5 + 6 = 29$
- In APL, all infix operators have same precedence
 - Thus we still don't know what the value is (handled by associativity)
- How do we handle precedence in grammar?

10/16/08

53

Precedence in Grammar

- Higher precedence translates to longer derivation chain
- Example:
 $\langle \text{exp} \rangle ::= \langle \text{id} \rangle \mid \langle \text{exp} \rangle + \langle \text{exp} \rangle \mid \langle \text{exp} \rangle * \langle \text{exp} \rangle$
- Becomes
 $\langle \text{exp} \rangle ::= \langle \text{mult_exp} \rangle \mid \langle \text{exp} \rangle + \langle \text{mult_exp} \rangle$
 $\langle \text{mult_exp} \rangle ::= \langle \text{id} \rangle \mid \langle \text{mult_exp} \rangle * \langle \text{id} \rangle$

10/16/08

54
