Based in part on slides by Mattox Beckman, as updated
by Vikram Adve and Gul Agha

LR Parsing

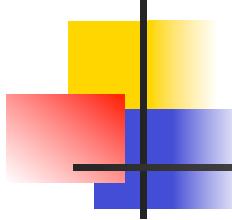

- Read tokens left to right (L)
- Create a rightmost derivation (R)
- How is this possible?
- Start at the bottom (left) and work your way up
- Last step has only one non-terminal to be replaced so is right-most
- Working backwards, replace mixed strings by non-terminals
- Always proceed so that there are no non-terminals to the right of the string to be replaced

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \quad \Rightarrow$

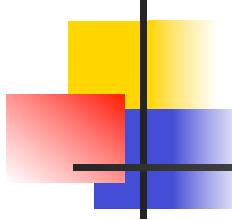

$$= \bullet (0 + 1) + 0 \quad \text{shift}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

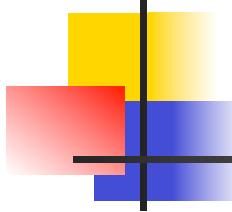

$$\begin{aligned} &= (\bullet 0 + 1) + 0 && \text{shift} \\ &= \bullet (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

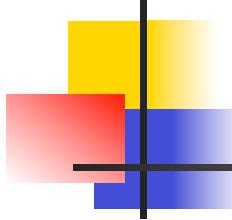

$$\begin{aligned} &\Rightarrow (0 \textcolor{pink}{\bullet} + 1) + 0 && \text{reduce} \\ &= (\textcolor{pink}{\bullet} 0 + 1) + 0 && \text{shift} \\ &= \textcolor{pink}{\bullet} (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

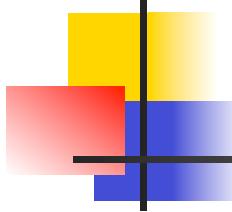

$$\begin{aligned} &= (\langle \text{Sum} \rangle \bullet + 1) + 0 && \text{shift} \\ &\Rightarrow (0 \bullet + 1) + 0 && \text{reduce} \\ &= (\bullet 0 + 1) + 0 && \text{shift} \\ &= \bullet (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

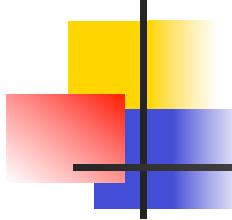

$$\begin{aligned} &= (\langle \text{Sum} \rangle + 1) + 0 && \text{shift} \\ &= (\langle \text{Sum} \rangle 1 +) + 0 && \text{shift} \\ &\Rightarrow (0 1 +) + 0 && \text{reduce} \\ &= (0 + 1) + 0 && \text{shift} \\ &= 0 (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle \mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle)$

$\langle \text{Sum} \rangle \Rightarrow$

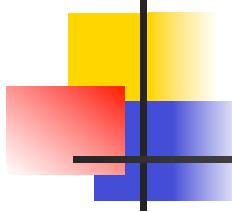

$$\begin{aligned} &\Rightarrow (\langle \text{Sum} \rangle + 1 \bullet) + 0 && \text{reduce} \\ &= (\langle \text{Sum} \rangle + \bullet 1) + 0 && \text{shift} \\ &= (\langle \text{Sum} \rangle \bullet + 1) + 0 && \text{shift} \\ &\Rightarrow (0 \bullet + 1) + 0 && \text{reduce} \\ &= (\bullet 0 + 1) + 0 && \text{shift} \\ &= \bullet (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

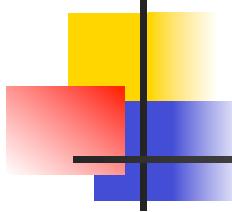

$\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0 \quad \text{reduce}$
 $\Rightarrow (\langle \text{Sum} \rangle + 1 \bullet) + 0 \quad \text{reduce}$
 $= (\langle \text{Sum} \rangle + \bullet 1) + 0 \quad \text{shift}$
 $= (\langle \text{Sum} \rangle \bullet + 1) + 0 \quad \text{shift}$
 $\Rightarrow (0 \bullet + 1) + 0 \quad \text{reduce}$
 $= (\bullet 0 + 1) + 0 \quad \text{shift}$
 $= \bullet (0 + 1) + 0 \quad \text{shift}$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

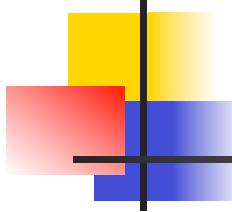

$$\begin{aligned} &= (\langle \text{Sum} \rangle \bullet) + 0 && \text{shift} \\ &\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0 && \text{reduce} \\ &\Rightarrow (\langle \text{Sum} \rangle + 1 \bullet) + 0 && \text{reduce} \\ &= (\langle \text{Sum} \rangle + \bullet 1) + 0 && \text{shift} \\ &= (\langle \text{Sum} \rangle \bullet + 1) + 0 && \text{shift} \\ &\Rightarrow (0 \bullet + 1) + 0 && \text{reduce} \\ &= (\bullet 0 + 1) + 0 && \text{shift} \\ &= \bullet (0 + 1) + 0 && \text{shift} \end{aligned}$$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

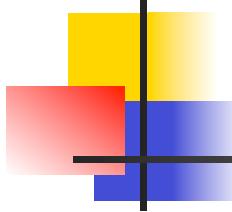

$\Rightarrow (\langle \text{Sum} \rangle) \bullet + 0 \quad \text{reduce}$
 $= (\langle \text{Sum} \rangle \bullet) + 0 \quad \text{shift}$
 $\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0 \quad \text{reduce}$
 $\Rightarrow (\langle \text{Sum} \rangle + 1 \bullet) + 0 \quad \text{reduce}$
 $= (\langle \text{Sum} \rangle + \bullet 1) + 0 \quad \text{shift}$
 $= (\langle \text{Sum} \rangle \bullet + 1) + 0 \quad \text{shift}$
 $\Rightarrow (0 \bullet + 1) + 0 \quad \text{reduce}$
 $= (\bullet 0 + 1) + 0 \quad \text{shift}$
 $= \bullet (0 + 1) + 0 \quad \text{shift}$

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

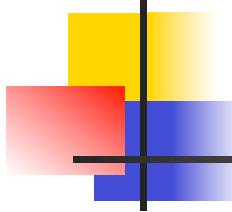

= $\langle \text{Sum} \rangle \bullet + 0$ shift
=> $(\langle \text{Sum} \rangle) \bullet + 0$ reduce
= $(\langle \text{Sum} \rangle \bullet) + 0$ shift
=> $(\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0$ reduce
=> $(\langle \text{Sum} \rangle + 1 \bullet) + 0$ reduce
= $(\langle \text{Sum} \rangle + \bullet 1) + 0$ shift
= $(\langle \text{Sum} \rangle \bullet + 1) + 0$ shift
=> $(0 \bullet + 1) + 0$ reduce
= $(\bullet 0 + 1) + 0$ shift
= $\bullet (0 + 1) + 0$ shift

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

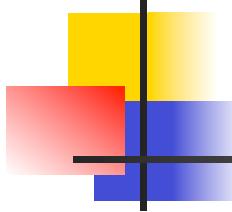

$\langle \text{Sum} \rangle \Rightarrow$

$= \langle \text{Sum} \rangle + 0$	shift
$= \langle \text{Sum} \rangle 0 + 0$	shift
$\Rightarrow (\langle \text{Sum} \rangle) 0 + 0$	reduce
$= (\langle \text{Sum} \rangle 0) + 0$	shift
$\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle 0) + 0$	reduce
$\Rightarrow (\langle \text{Sum} \rangle + 1 0) + 0$	reduce
$= (\langle \text{Sum} \rangle + 0 1) + 0$	shift
$= (\langle \text{Sum} \rangle 0 + 1) + 0$	shift
$\Rightarrow (0 \langle \text{Sum} \rangle + 1) + 0$	reduce
$= (0 + \langle \text{Sum} \rangle 1) + 0$	shift
$= 0 + (\langle \text{Sum} \rangle 1)$	shift

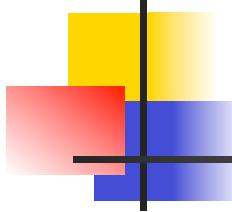

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle$	\Rightarrow	
	$\Rightarrow \langle \text{Sum} \rangle + 0$	reduce
	$= \langle \text{Sum} \rangle + 0$	shift
	$= \langle \text{Sum} \rangle 0 + 0$	shift
	$\Rightarrow (\langle \text{Sum} \rangle) 0 + 0$	reduce
	$= (\langle \text{Sum} \rangle 0) + 0$	shift
	$\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle 0) + 0$	reduce
	$\Rightarrow (\langle \text{Sum} \rangle + 1 0) + 0$	reduce
	$= (\langle \text{Sum} \rangle + 0 1) + 0$	shift
	$= (\langle \text{Sum} \rangle 0 + 1) + 0$	shift
	$\Rightarrow (0 \langle \text{Sum} \rangle + 1) + 0$	reduce
	$= (0 0 + 1) + 0$	shift
	$= 0 (0 + 1) + 0$	shift

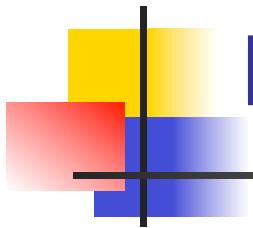

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle$	$=> \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet$	reduce
	$=> \langle \text{Sum} \rangle + 0 \bullet$	reduce
	$= \langle \text{Sum} \rangle + \bullet 0$	shift
	$= \langle \text{Sum} \rangle \bullet + 0$	shift
	$=> (\langle \text{Sum} \rangle) \bullet + 0$	reduce
	$= (\langle \text{Sum} \rangle \bullet) + 0$	shift
	$=> (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0$	reduce
	$=> (\langle \text{Sum} \rangle + 1 \bullet) + 0$	reduce
	$= (\langle \text{Sum} \rangle + \bullet 1) + 0$	shift
	$= (\langle \text{Sum} \rangle \bullet + 1) + 0$	shift
	$=> (0 \bullet + 1) + 0$	reduce
	$= (\bullet 0 + 1) + 0$	shift
	$= \bullet (0 + 1) + 0$	shift

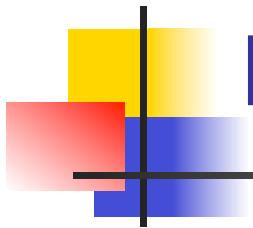

Example: $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle$
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \bullet \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet$	reduce
$\Rightarrow \langle \text{Sum} \rangle + 0 \bullet$	reduce
$= \langle \text{Sum} \rangle + \bullet 0$	shift
$= \langle \text{Sum} \rangle \bullet + 0$	shift
$\Rightarrow (\langle \text{Sum} \rangle) \bullet + 0$	reduce
$= (\langle \text{Sum} \rangle \bullet) + 0$	shift
$\Rightarrow (\langle \text{Sum} \rangle + \langle \text{Sum} \rangle \bullet) + 0$	reduce
$\Rightarrow (\langle \text{Sum} \rangle + 1 \bullet) + 0$	reduce
$= (\langle \text{Sum} \rangle + \bullet 1) + 0$	shift
$= (\langle \text{Sum} \rangle \bullet + 1) + 0$	shift
$\Rightarrow (0 \bullet + 1) + 0$	reduce
$= (\bullet 0 + 1) + 0$	shift
$= \bullet (0 + 1) + 0$	shift

Example

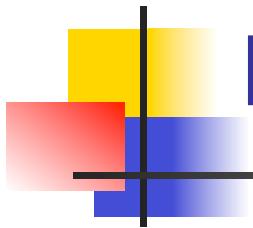

$$(\quad 0 \quad + \quad 1 \quad) \quad + \quad 0$$

Example

$$(\quad 0 \quad + \quad 1 \quad) \quad + \quad 0$$

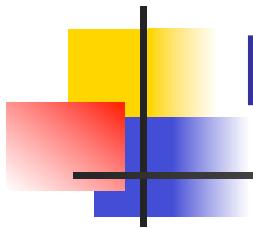

↑

Example

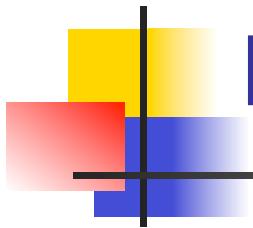

$$(\quad 0 \quad + \quad 1 \quad) \quad + \quad 0$$

↑

Example

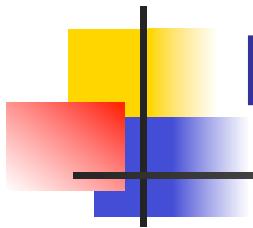

$$(\text{} \circ 0 + 1) + 0$$

Example

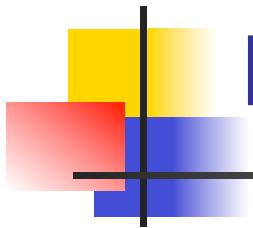

$$(\text{} \ 0 + 1) + 0$$

A diagram illustrating a summation operation. It features a large circle containing the text "<Sum>". Inside the circle, the number "0" is positioned below the center. To the right of the circle, there is a plus sign ("+"). To the right of the plus sign is the number "1". Below the number "1" is a pink arrow pointing upwards, indicating the value being summed. To the right of the number "1" is another plus sign ("+"). To the right of this second plus sign is the number "0". The entire expression is enclosed in parentheses, suggesting it is part of a larger mathematical statement.

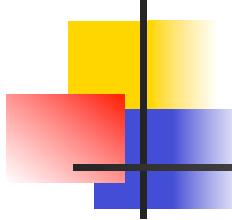

Example

$$(\text{} \quad 0 \quad + \quad 1 \quad) \quad + \quad 0$$

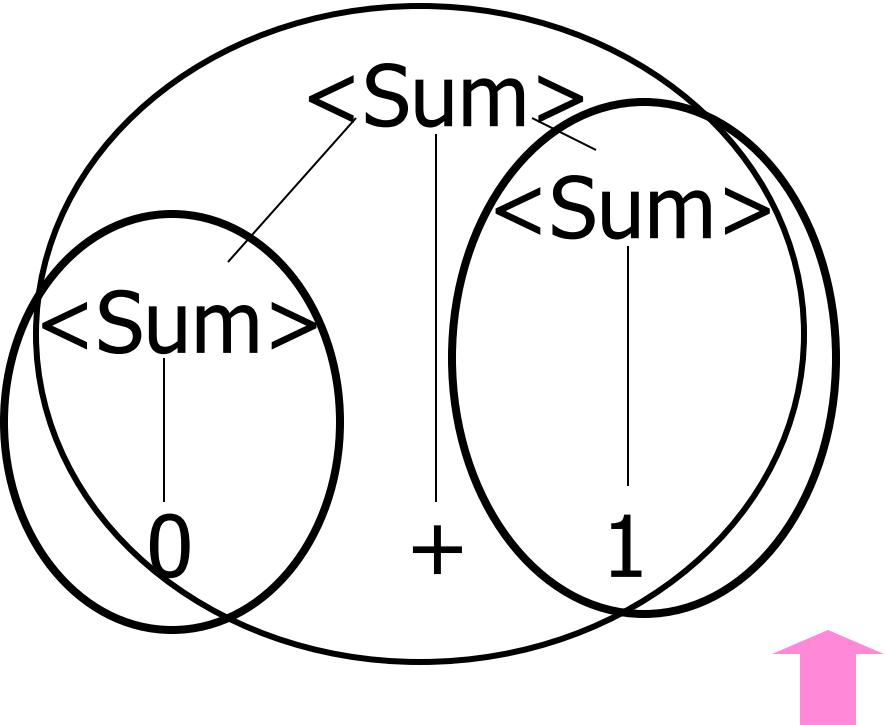

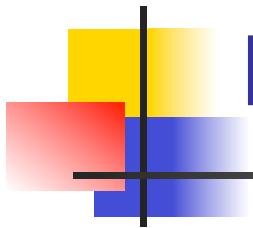

Example

$$(\text{} \quad 0 \quad + \quad \text{} \quad 1 \quad) \quad + \quad 0$$

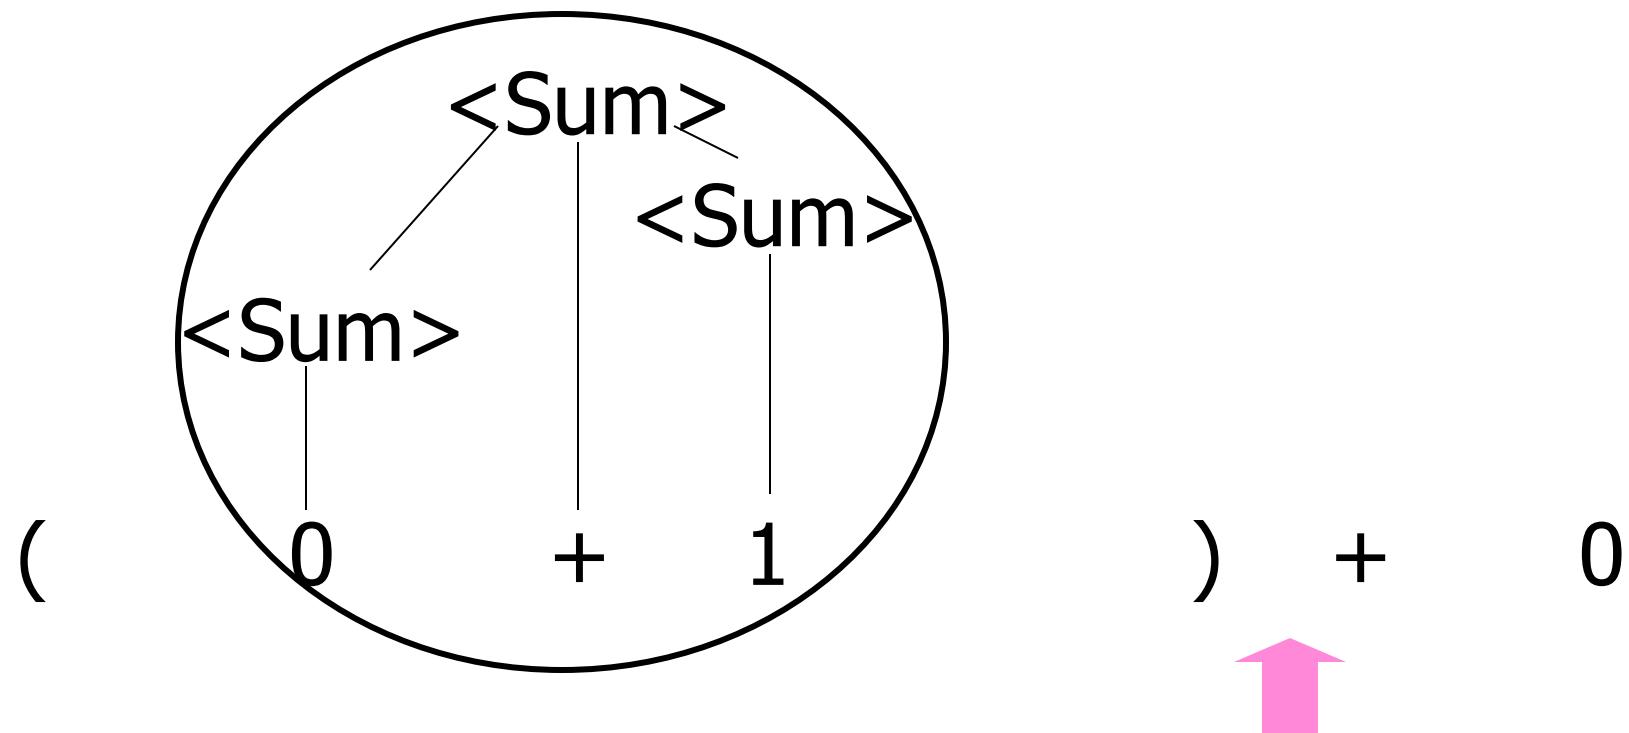

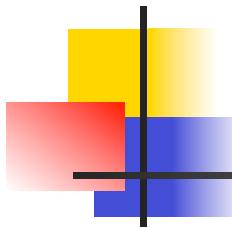

Example

$$(\begin{array}{c} <\text{Sum}> \\ \circ \\ 0 \end{array} + \begin{array}{c} <\text{Sum}> \\ \circ \\ 1 \end{array}) + 0$$

LR Parsing Tables

- Build a pair of tables, Action and Goto, from the grammar
 - This is the hardest part, we omit here
 - Rows labeled by states
 - For Action, columns labeled by terminals and “end-of-tokens” marker
 - (more generally strings of terminals of fixed length)
 - For Goto, columns labeled by non-terminals

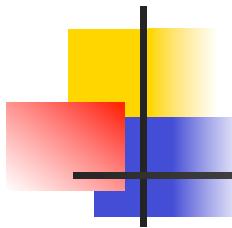

Action and Goto Tables

- Given a state and the next input, Action table says either
 - **shift** and go to state n , or
 - **reduce** by production k (explained in a bit)
 - **accept** or **error**
- Given a state and a non-terminal, Goto table says
 - go to state m

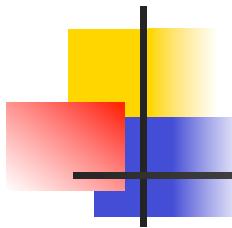

LR(i) Parsing Algorithm

- Based on push-down automata
- Uses states and transitions (as recorded in Action and Goto tables)
- Uses a stack containing states, terminals and non-terminals

LR(i) Parsing Algorithm

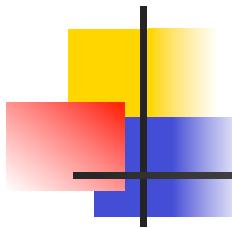

0. Insure token stream ends in special “end-of-tokens” symbol
1. Start in state 1 with an empty stack
2. Push **state(1)** onto stack
- 3. Look at next i tokens from token stream (*toks*) (don’t remove yet)
4. If top symbol on stack is **state(n)**, look up action in Action table at (n, toks)

LR(i) Parsing Algorithm

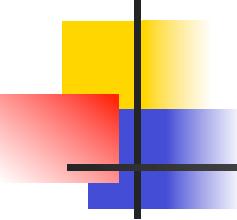

5. If action = **shift** m ,

- a) Remove the top token from token stream and push it onto the stack
- b) Push **state**(m) onto stack
- c) Go to step 3

LR(i) Parsing Algorithm

6. If action = **reduce** k where production k is
 $E ::= u$
 - a) Remove $2 * \text{length}(u)$ symbols from stack (u and all the interleaved states)
 - b) If new top symbol on stack is **state**(m), look up new state p in $\text{Goto}(m, E)$
 - c) Push E onto the stack, then push **state**(p) onto the stack
 - d) Go to step 3

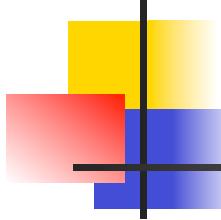

LR(i) Parsing Algorithm

7. If action = **accept**

- Stop parsing, return success

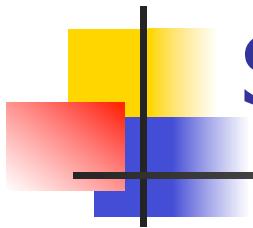

8. If action = **error**,

- Stop parsing, return failure

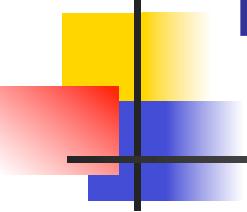

Adding Synthesized Attributes

- Add to each **reduce** a rule for calculating the new synthesized attribute from the component attributes
- Add to each non-terminal pushed onto the stack, the attribute calculated for it
- When performing a **reduce**,
 - gather the recorded attributes from each non-terminal popped from stack
 - Compute new attribute for non-terminal pushed onto stack

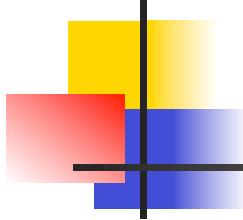

Shift-Reduce Conflicts

- **Problem:** can't decide whether the action for a state and input character should be **shift** or **reduce**
- Caused by ambiguity in grammar
- Usually caused by lack of associativity or precedence information in grammar

Example: $\text{<Sum>} = 0 \mid 1 \mid (\text{<Sum>})$
| $\text{<Sum>} + \text{<Sum>}$

$0 + 1 + 0$ $\rightarrow 0 + 1 + 0$ $\rightarrow \text{<Sum>} + \text{<Sum>} + 0$	shift reduce shift shift reduce
---	---

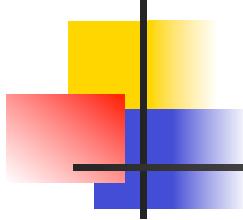

Example - cont

- **Problem:** shift or reduce?

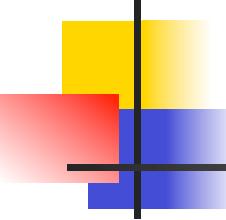

- You can shift-shift-reduce-reduce or reduce-shift-shift-reduce

- Shift first - right associative
- Reduce first- left associative

Reduce - Reduce Conflicts

- **Problem:** can't decide between two different rules to reduce by
- Again caused by ambiguity in grammar
- **Symptom:** RHS of one production suffix of another
- Requires examining grammar and rewriting it
- Harder to solve than shift-reduce errors

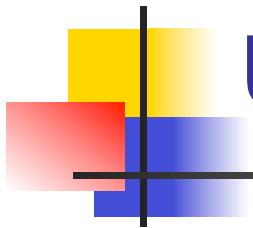

Example

- $S ::= A \mid aB \quad A ::= abc \quad B ::= bc$

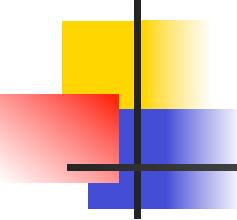

● abc	shift
a ● bc	shift
ab ● c	shift
abc ●	

- Problem: reduce by $B ::= bc$ then by $S ::= aB$, or by $A ::= abc$ then $S ::= A$?

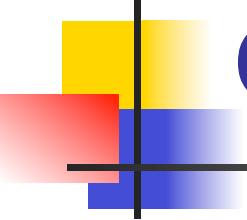

Using Ocaml yacc

- Input attribute grammar is put in file
 $\langle\text{grammar}\rangle.\text{mly}$
- Execute
 $\text{ocamlyacc } \langle\text{grammar}\rangle.\text{mly}$
- Produces code for parser in
 $\langle\text{grammar}\rangle.\text{ml}$
and interface (including type declaration for tokens) in
 $\langle\text{grammar}\rangle.\text{mli}$

Parser Code

- `<grammar>.ml` defines one parsing function per entry point
- Parsing function takes a lexing function (lexer buffer to token) and a lexer buffer as arguments
- Returns semantic attribute of corresponding entry point

Ocamlyacc Input

- File format:

`%{`

<header>

`%}`

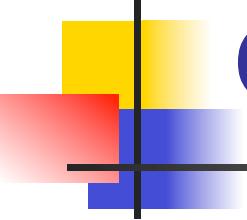

<declarations>

`%%`

<rules>

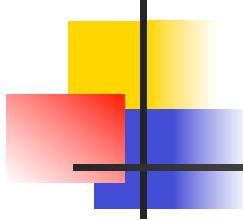

`%%`

<trailer>

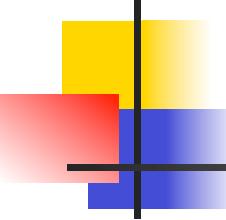

Ocamlyacc <*header*>

- Contains arbitrary Ocaml code
- Typically used to give types and functions needed for the semantic actions of rules and to give specialized error recovery
- May be omitted
- <*footer*> similar. Possibly used to call parser

Ocamlyacc <declarations>

- **%token** *symbol* ... *symbol*
- Declare given symbols as tokens
- **%token <type>** *symbol* ... *symbol*
- Declare given symbols as token constructors, taking an argument of type *<type>*
- **%start** *symbol* ... *symbol*
- Declare given symbols as entry points; functions of same names in *<grammar>.ml*

Ocamlyacc <declarations>

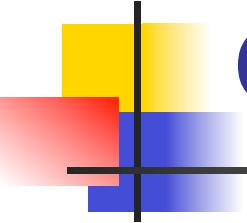

- **%type** *<type> symbol ... symbol*

Specify type of attributes for given symbols.

Mandatory for start symbols

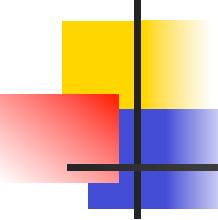

- **%left** *symbol ... symbol*
- **%right** *symbol ... symbol*
- **%nonassoc** *symbol ... symbol*

Associate precedence and associativity to given symbols. Same line, same precedence; earlier line, lower precedence (broadest scope)

Ocamlyacc <rules>

- *nonterminal* :
 - *symbol ... symbol { semantic_action }*
 - ...
 - *symbol ... symbol { semantic_action }*
- ;
- Semantic actions are arbitrary Ocaml expressions
- Must be of same type as declared (or inferred) for *nonterminal*
- Access semantic attributes (values) of symbols by position: \$1 for first symbol, \$2 to second ...

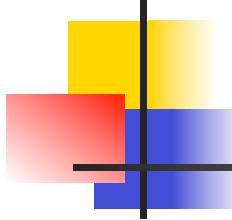

Example - Base types

```
(* File: expr.ml *)
```

```
type expr =
  Term_as_Expr of term
  | Plus_Expr of (term * expr)
  | Minus_Expr of (term * expr)
```

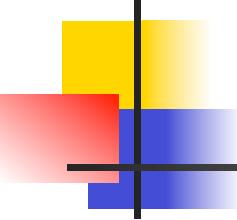

```
and term =
  Factor_as_Term of factor
  | Mult_Term of (factor * term)
  | Div_Term of (factor * term)
```

```
and factor =
  Id_as_Factor of string
  | Parenthesized_Expr_as_Factor of expr
```

Example - Lexer (exprlex.mll)

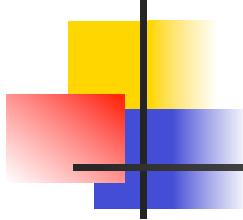

```
{ (*open Exprparse*) }
let numeric = ['0' - '9']
let letter =['a' - 'z' 'A' - 'Z']
rule token = parse
| "+" {Plus_token}
| "-" {Minus_token}
| "*" {Times_token}
| "/" {Divide_token}
| "(" {Left_parenthesis}
| ")" {Right_parenthesis}
| letter (letter|numeric|"_")* as id {Id_token id}
| [' ' '\t' '\n'] {token lexbuf}
| eof {EOL}
```

Example - Parser (exprparse.mly)

```
%{ open Expr
%}

%token <string> Id_token
%token Left_parenthesis Right_parenthesis
%token Times_token Divide_token
%token Plus_token Minus_token
%token EOL
%start main
%type <expr> main
%%
```

Example - Parser (exprparse.mly)

expr:

term

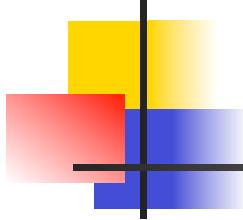

{ Term_as_Expr \$1 }

| term Plus_token expr

{ Plus_Expr (\$1, \$3) }

| term Minus_token expr

{ Minus_Expr (\$1, \$3) }

Example - Parser (exprparse.mly)

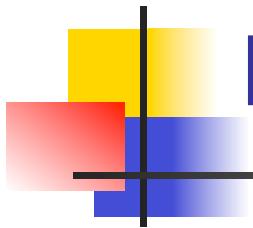

term:

factor

{ Factor_as_Term \$1 }

| factor Times_token term
{ Mult_Term (\$1, \$3) }

| factor Divide_token term
{ Div_Term (\$1, \$3) }

Example - Parser (exprparse.mly)

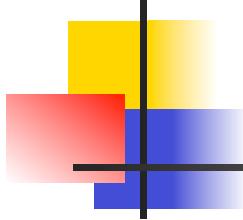

factor:

```
Id_token
  { Id_as_Factor $1 }
```

```
| Left_parenthesis expr Right_parenthesis
  { Parenthesized_Expr_as_Factor $2 }
```

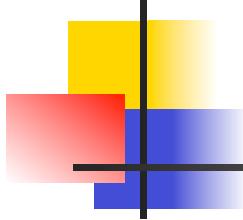

main:

```
| expr EOL
  { $1 }
```

Example - Using Parser

```
# #use "expr.ml";;
...
# #use "exprparse.ml";;
...
# #use "exprlex.ml";;
...
# let test s =
  let lexbuf = Lexing.from_string (s^"\n") in
  main token lexbuf;;
```

Example - Using Parser

```
# test "a + b";;
- : expr =
Plus_Expr
(Factor_as_Term (Id_as_Factor "a"),
Term_as_Expr (Factor_as_Term
(Id_as_Factor "b")))
```
