

Programming Languages and Compilers (CS 421)

Elsa L Gunter
2112 SC, UIUC

<https://courses.engr.illinois.edu/cs421/sp2024>

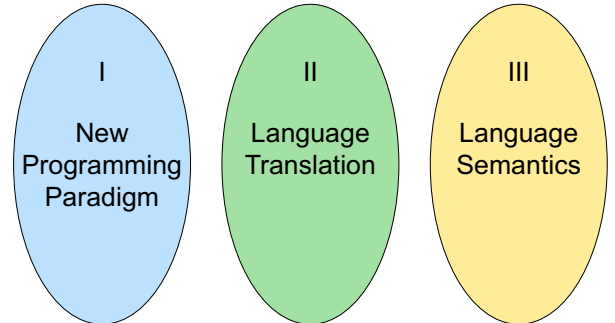

Based in part on slides by Mattox Beckman, as updated by Vikram Adve and Gul Agha

1/15/24

1

Programming Languages & Compilers

Three Main Topics of the Course

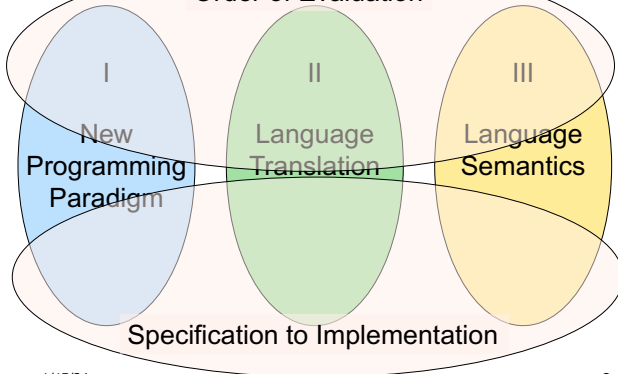

1/15/24

2

Programming Languages & Compilers

Order of Evaluation

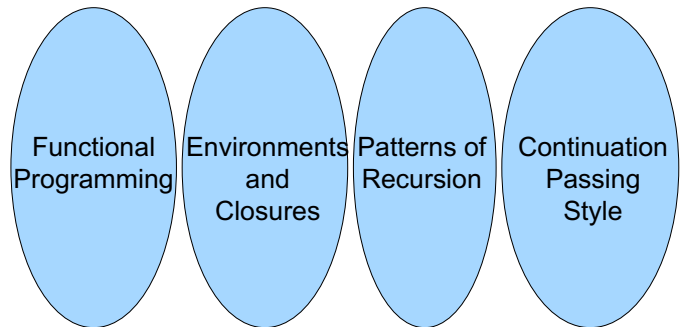

1/15/24

3

Programming Languages & Compilers

I : New Programming Paradigm

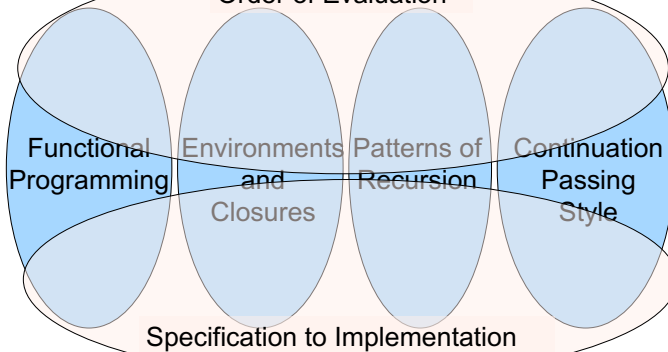

1/15/24

4

Programming Languages & Compilers

Order of Evaluation

1/15/24

5

Programming Languages & Compilers

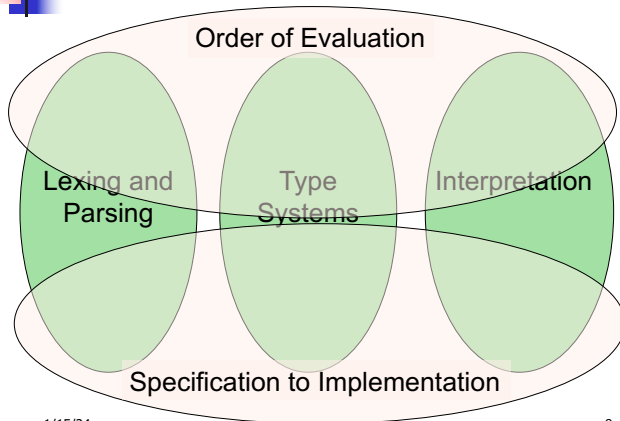

II : Language Translation

1/15/24

6

Programming Languages & Compilers

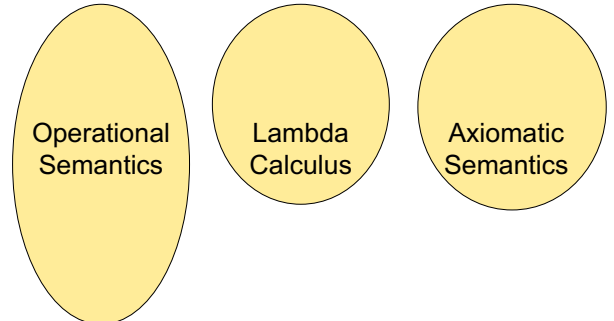

1/15/24

8

Programming Languages & Compilers

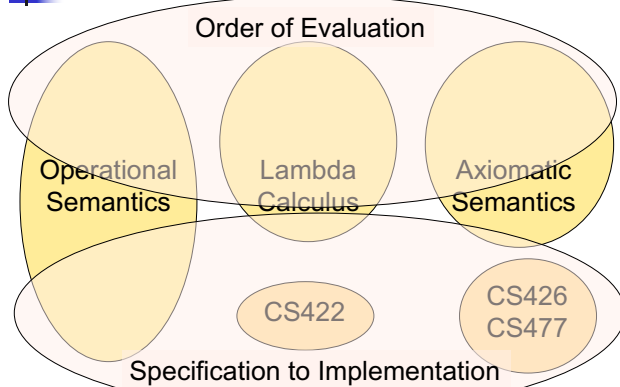

III : Language Semantics

1/15/24

9

Programming Languages & Compilers

1/15/24

10

Contact Information - Elsa L Gunter

- Office: 2112 SC
- Office hours:
 - TBD
 - Can attend in zoom
 - Also by appointment
- Email: egunter@illinois.edu

1/15/24

Course Website

- <https://courses.engr.illinois.edu/cs421/sp2024>
- Main page - summary of news items
- Policy - rules governing course
- Lectures - syllabus and slides
- MPs - information about assignments
- Exams – Syllabi and review material for Midterms and finals
- Unit Projects - for 4 credit students
- Resources - tools and helpful info
- FAQ

1/15/24

15

Some Course References

- No required textbook
- Some suggested references

1/15/24

16

Some Course References

- No required textbook.
- Pictures of the books on previous slide
- Essentials of Programming Languages (2nd Edition) by Daniel P. Friedman, Mitchell Wand and Christopher T. Haynes, MIT Press 2001.
- Compilers: Principles, Techniques, and Tools, (also known as "The Dragon Book"); by Aho, Sethi, and Ullman. Published by Addison-Wesley. ISBN: 0-201-10088-6.
- Modern Compiler Implementation in ML by Andrew W. Appel, Cambridge University Press 1998
- Additional ones for Ocaml given separately

1/15/24

17

Course Grading

- Assignments 10%
 - Web Assignments (WA) (~3-6%)
 - MPs (in Ocaml) (~4-7%)
 - All WAs and MPs Submitted by **PrairieLearn**
 - Late submission penalty:
score capped at 80% of total

1/15/24

18

Course Grading

- Five quizzes - 10% (2% each)
 - In class, BYOD
 - Tentatively Jan 23, Feb 6, Feb 27, Mar 26, Apr 23
- 3 Midterms - 15% each
 - **Feb 12-14, Mar 6-8, Apr 11-13**
 - **BE AVAILABLE FOR THESE DATES!**
- Final 35%
- Tuesday May 7, 7:00pm – 10:00pm
- Percentages based on 3 cr, are approximate

1/15/24

19

Course Assignments – WA & MP

- You may discuss assignments and their solutions with others
- You may work in groups, but you must **list members with whom you worked** if you share solutions or detailed solution outlines
- **Each student must write up and turn in their own solution separately**
- You may look at examples from class and other similar examples from any source – **cite appropriately**
 - Note: University policy on plagiarism still holds - cite your sources if you are not the sole author of your solution
 - Do not have to cite course notes or course staff

1/15/24

20

OCAML

- Locally:
 - Will use ocaml inside VSCode inside PrairieLearn problems this semester
- Globally:
 - Main OCAML home: <http://ocaml.org>
 - To install OCAML on your computer see: <http://ocaml.org/docs/install.html>
 - To try on the web: <https://try.ocamlpro.com>
 - More notes on this later

1/15/24

21

References for OCaml

- Supplemental texts (not required):
 - The Objective Caml system release 4.05, by Xavier Leroy, online manual
 - Introduction to the Objective Caml Programming Language, by Jason Hickey
 - Developing Applications With Objective Caml, by Emmanuel Chailloux, Pascal Manoury, and Bruno Pagano, on O'Reilly
 - Available online from course resources

1/15/24

22

Features of OCAML

- Higher order applicative language
- Call-by-value parameter passing
- Modern syntax
- Parametric polymorphism
 - Aka structural polymorphism
- Automatic garbage collection
- User-defined algebraic data types

1/15/24

25

Session in OCAML

```
% ocaml
Objective Caml version 4.07.1
# (* Read-eval-print loop; expressions and
  declarations *)
  2 + 3;; (* Expression *)
- : int = 5
# 3 < 2;;
- : bool = false
```

1/15/24

27

Declarations; Sequencing of Declarations

```
# let x = 2 + 3;; (* declaration *)
val x : int = 5
# let test = 3 < 2;;
val test : bool = false
# let a = 1 let b = a + 4;; (* Sequence of dec
  *)
val a : int = 1
val b : int = 5
```

1/15/24

28

Functions

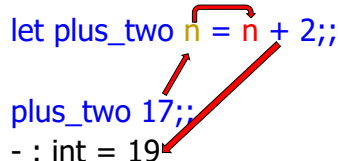

```
# let plus_two n = n + 2;;
val plus_two : int -> int = <fun>
# plus_two 17;;
- : int = 19
```

1/15/24

29

Functions

```
let plus_two n = n + 2;;
plus_two 17;;
- : int = 19
```

1/15/24

31

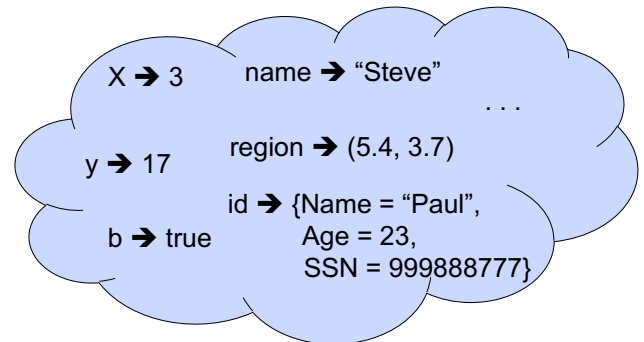

Environments

- *Environments* record what value is associated with a given identifier
- Central to the semantics and implementation of a language
- Notation
 - $\rho = \{\text{name}_1 \rightarrow \text{value}_1, \text{name}_2 \rightarrow \text{value}_2, \dots\}$
 - Using set notation, but describes a partial function
- Often stored as list, or stack
 - To find value start from left and take first match

1/15/24

44

Environments

1/15/24

45

Global Variable Creation

```
# 2 + 3;; (* Expression *)  
// doesn't affect the environment  
# let test = 3 < 2;; (* Declaration *)  
val test : bool = false  
//  $\rho_1 = \{\text{test} \rightarrow \text{false}\}$   
# let a = 1 let b = a + 4;; (* Seq of dec *)  
//  $\rho_2 = \{\text{b} \rightarrow 5, \text{a} \rightarrow 1, \text{test} \rightarrow \text{false}\}$ 
```

1/15/24

46

Environments

1/15/24

47

New Bindings Hide Old

```
//  $\rho_2 = \{\text{b} \rightarrow 5, \text{a} \rightarrow 1, \text{test} \rightarrow \text{false}\}$   
let test = 3.7;;
```

- What is the environment after this declaration?

1/15/24

48

New Bindings Hide Old

```
//  $\rho_2 = \{\text{b} \rightarrow 5, \text{a} \rightarrow 1, \text{test} \rightarrow \text{false}\}$   
let test = 3.7;;
```

- What is the environment after this declaration?

```
//  $\rho_3 = \{\text{test} \rightarrow 3.7, \text{a} \rightarrow 1, \text{b} \rightarrow 5\}$ 
```

1/15/24

49

Environments

1/15/24

50

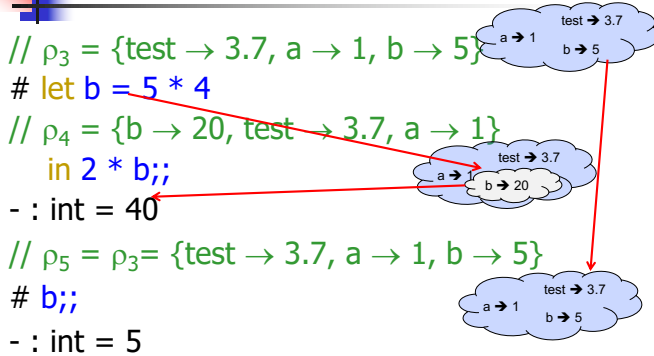

Now it's your turn

You should be able to do WA1-IC Problem 1, parts (* 1 *) - (* 3 *)

1/15/24

51

Local Variable Creation

1/15/24

53

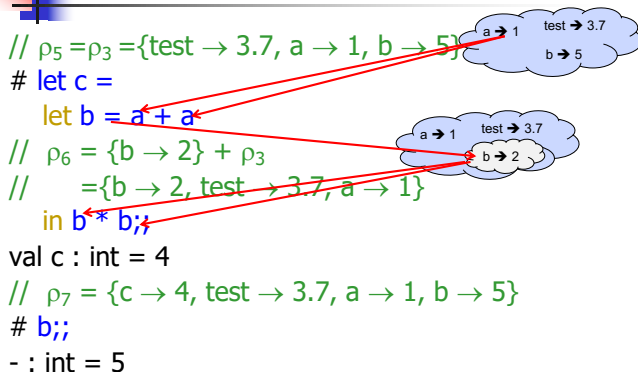

Local let binding

1/15/24

54

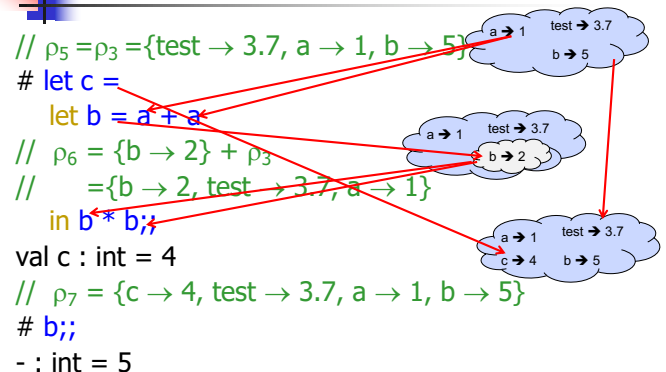

Local let binding

1/15/24

55

Local let binding

1/15/24

56

Functions

```
# let plus_two n = n + 2;;  
val plus_two : int -> int = <fun>  
# plus_two 17;;  
- : int = 19
```

1/15/24

57

Functions

```
let plus_two n = n + 2;;  
plus_two 17;;  
- : int = 19
```

1/15/24

58

Nameless Functions (aka Lambda Terms)

```
fun n -> n + 2;;  
(fun n -> n + 2) 17;;  
- : int = 19
```

1/15/24

59

Functions

```
# let plus_two n = n + 2;;  
val plus_two : int -> int = <fun>  
# plus_two 17;;  
- : int = 19  
# let plus_two = fun n -> n + 2;;  
val plus_two : int -> int = <fun>  
# plus_two 14;;  
- : int = 16
```

First definition syntactic sugar for second

1/15/24

61

Using a nameless function

```
# (fun x -> x * 3) 5;; (* An application *)  
- : int = 15  
# ((fun y -> y +. 2.0), (fun z -> z * 3));;  
(* As data *)  
- : (float -> float) * (int -> int) = (<fun>, <fun>)
```

Note: in fun v -> exp(v), scope of variable is only the body exp(v)

1/15/24

62

Values fixed at declaration time

```
# let x = 12;;  
val x : int = 12  
# let plus_x y = y + x;;  
val plus_x : int -> int = <fun>  
# plus_x 3;;
```

What is the result?

1/15/24

64

Values fixed at declaration time

```
# let x = 12;;  
val x : int = 12  
# let plus_x y = y + x;;  
val plus_x : int -> int = <fun>  
# plus_x 3;;  
- : int = 15
```

1/15/24

65

Values fixed at declaration time

```
# let x = 7;; (* New declaration, not an  
update *)  
val x : int = 7  
  
# plus_x 3;;
```

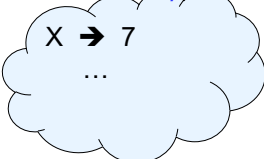

What is the result this time?

1/15/24

66

Values fixed at declaration time

```
# let x = 7;; (* New declaration, not an  
update *)  
val x : int = 7  
# plus_x 3;;
```

What is the result this time?

1/15/24

67

Values fixed at declaration time

```
# let x = 7;; (* New declaration, not an  
update *)  
val x : int = 7  
  
# plus_x 3;;  
- : int = 15
```

1/15/24

68

Question

- Observation: Functions are first-class values in this language
- Question: What value does the environment record for a function variable?
- Answer: a closure

1/15/24

69

Save the Environment!

- A *closure* is a pair of an environment and an association of a formal parameter (the input variables)* with an expression (the function body), written:
$$f \rightarrow \langle (v_1, \dots, v_n) \rightarrow \text{exp}, \rho_f \rangle$$
- Where ρ_f is the environment in effect when f is defined (if f is a simple function)
- * Will come back to the "formal parameter"

1/15/24

70

Closure for plus_x

- When plus_x was defined, had environment:

$\rho_{\text{plus_x}} = \{\dots, x \rightarrow 12, \dots\}$

- Recall: `let plus_x y = y + x`

is really `let plus_x = fun y -> y + x`

- Closure for `fun y -> y + x`:

$\langle y \rightarrow y + x, \rho_{\text{plus_x}} \rangle$

- Environment just after plus_x defined:

$\{\text{plus_x} \rightarrow \langle y \rightarrow y + x, \rho_{\text{plus_x}} \rangle\} + \rho_{\text{plus_x}}$

1/15/24

71

Now it's your turn

You should be able complete ACT1

1/15/24

72

Functions with more than one argument

```
# let add_three x y z = x + y + z;;
val add_three : int -> int -> int -> int = <fun>
# let t = add_three 6 3 2;;
val t : int = 11
# let add_three =
  fun x -> (fun y -> (fun z -> x + y + z));;
val add_three : int -> int -> int -> int = <fun>
```

Again, first syntactic sugar for second

1/15/24

77

Functions with more than one argument

```
# let add_three x y z = x + y + z;;
val add_three : int -> int -> int -> int = <fun>
# What is the value of add_three?
# Let  $\rho_{\text{add\_three}}$  be the environment before the
  declaration
# Remember:
let add_three =
  fun x -> (fun y -> (fun z -> x + y + z));;
Value:  $\langle x -> \text{fun } y -> (\text{fun } z -> x + y + z), \rho_{\text{add\_three}} \rangle$ 
```

1/15/24

78

Partial application of functions

```
let add_three x y z = x + y + z;;
```

```
# let h = add_three 5 4;;
val h : int -> int = <fun>
# h 3;;
- : int = 12
# h 7;;
- : int = 16
```

1/15/24

79

Partial application of functions

```
let add_three x y z = x + y + z;;
```

```
# let h = add_three 5 4;;
val h : int -> int = <fun>
# h 3;;
- : int = 12
# h 7;;
- : int = 16
```

- Partial application also called *sectioning*

1/15/24

80

Functions as arguments

```
# let thrice f x = f (f (f x));;
val thrice : ('a -> 'a) -> 'a -> 'a = <fun>
# let g = thrice plus_two;;
val g : int -> int = <fun>
# g 4;;
- : int = 10
# thrice (fun s -> "Hi! " ^ s) "Good-bye!";;
- : string = "Hi! Hi! Hi! Good-bye!"
```

1/15/24

81

Tuples as Values

```
// ρ7 = {c → 4, test → 3.7,
          a → 1, b → 5}
# let s = (5, "hi", 3.2);;
val s : int * string * float = (5, "hi", 3.2)
```

```
// ρ8 = {s → (5, "hi", 3.2),
          c → 4, test → 3.7,
          a → 1, b → 5}
# let s = (5, "hi", 3.2);;
val s : int * string * float = (5, "hi", 3.2)
```

1/15/24

83

Pattern Matching with Tuples

```
/ ρ8 = {s → (5, "hi", 3.2),
          c → 4, test → 3.7,
          a → 1, b → 5}
# let (a,b,c) = s;; (* (a,b,c) is a pattern *)
val a : int = 5
val b : string = "hi"
val c : float = 3.2
# let x = 2, 9.3;; (* tuples don't require parens in Ocaml *)
val x : int * float = (2, 9.3)
```

1/15/24

84

Nested Tuples

```
# (*Tuples can be nested *)
let d = ((1,4,62),("bye",15),73.95);;
val d : (int * int * int) * (string * int) * float =
((1, 4, 62), ("bye", 15), 73.95)
# (*Patterns can be nested *)
let (p,(st,_)_) = d;; (* _ matches all, binds nothing *)
val p : int * int * int = (1, 4, 62)
val st : string = "bye"
```

1/15/24

86

Functions on tuples

```
# let plus_pair (n,m) = n + m;;
val plus_pair : int * int -> int = <fun>
# plus_pair (3,4);;
- : int = 7
# let double x = (x,x);;
val double : 'a -> 'a * 'a = <fun>
# double 3;;
- : int * int = (3, 3)
# double "hi";;
- : string * string = ("hi", "hi")
```

1/15/24

87

Match Expressions

```
# let triple_to_pair triple =
  match triple
  with (0, x, y) -> (x, y)
       | (x, 0, y) -> (x, y)
       | (x, y, _) -> (x, y);;
```

- Each clause: pattern on left, expression on right
- Each x, y has scope of only its clause
- Use first matching clause

```
val triple_to_pair : int * int * int -> int * int = <fun>
```

1/15/24

88

Closure for plus_pair

- Assume $\rho_{\text{plus_pair}}$ was the environment just before `plus_pair` defined
- Closure for `plus_pair`:

$\langle (n,m) \rightarrow n + m, \rho_{\text{plus_pair}} \rangle$

- Environment just after `plus_pair` defined:

$\{\text{plus_pair} \rightarrow \langle (n,m) \rightarrow n + m, \rho_{\text{plus_pair}} \rangle\}$
 $+ \rho_{\text{plus_pair}}$

1/15/24

90

Save the Environment!

- A *closure* is a pair of an environment and an association of a pattern (e.g. (v_1, \dots, v_n) giving the input variables) with an expression (the function body), written:

$\langle (v_1, \dots, v_n) \rightarrow \text{exp}, \rho \rangle$

- Where ρ is the environment in effect when the function is defined (for a simple function)

1/15/24

91

Evaluating declarations

- Evaluation uses an environment ρ
- To evaluate a (simple) declaration `let x = e`
 - Evaluate expression e in ρ to value v
 - Update ρ with x v : $\{x \rightarrow v\} + \rho$
- Update: $\rho_1 + \rho_2$ has all the bindings in ρ_1 and all those in ρ_2 that are not rebound in ρ_1
 $\{x \rightarrow 2, y \rightarrow 3, a \rightarrow \text{"hi"}\} + \{y \rightarrow 100, b \rightarrow 6\}$
 $= \{x \rightarrow 2, y \rightarrow 3, a \rightarrow \text{"hi"}, b \rightarrow 6\}$

1/15/24

92

Evaluating expressions in OCaml

- Evaluation uses an environment ρ
- A constant evaluates to itself, including primitive operators like `+` and `=`
- To evaluate a variable, look it up in ρ : $\rho(v)$
- To evaluate a tuple (e_1, \dots, e_n) ,
 - Evaluate each e_i to v_i , right to left for OCaml
 - Then make value (v_1, \dots, v_n)

1/15/24

93

Evaluating expressions in OCaml

- To evaluate uses of `+`, `_`, etc, eval args, then do operation
- Function expression evaluates to its closure
- To evaluate a local dec: `let x = e1 in e2`
 - Eval e_1 to v , then eval e_2 using $\{x \rightarrow v\} + \rho$
- To evaluate a conditional expression: `if b then e1 else e2`
 - Evaluate b to a value v
 - If v is `True`, evaluate e_1
 - If v is `False`, evaluate e_2

1/15/24

94

Evaluation of Application with Closures

- Given application expression `f e`
- In OCaml, evaluate e to value v
- In environment ρ , evaluate left term to closure, $c = \langle (x_1, \dots, x_n) \rightarrow b, \rho' \rangle$
 - (x_1, \dots, x_n) variables in (first) argument
 - v must have form (v_1, \dots, v_n)
- Update the environment ρ' to
 $\rho'' = \{x_1 \rightarrow v_1, \dots, x_n \rightarrow v_n\} + \rho'$
- Evaluate body b in environment ρ''

1/15/24

95
