

Week 4 Prelab Video

Introduction

This week's prelab provided you with an opportunity to build a circuit both physically as well as in simulation. Produce a video that provides a tutorial on both to the viewer.

Learning Objectives

- Develop presentation skills through video.

Procedure

Produce a video between 30 and 60 seconds in length. In that video, start with your name and lab section. Then show your completed breadboard circuit and any two helpful hints to your viewer on best practices in breadboarding. Also, in that same video, use the falstad/circuit simulator to build a simple circuit using keyboard shortcuts. Mention those shortcuts as you build so that this video serves as a very simple tutorial.
