

# Experiment 11: The Final-Project Proposal

---

## Laboratory Outline

Today, you need to submit your project proposal. You have already been informed of the expectations of the project proposal and below is an example to also help guide you on the style of the content and the formatting. If you have already started characterizing devices to be used in your final project, please include that data in your proposal as well.

It is recommended that you begin work on your final project even as it is still being reviewed by your instructors. A great starting point is to work on ***Explore More! Modules*** that investigate sensors, amplify signals, or buffer one electronic circuit from another to be used to a grand design.
