## Physics 101: Lecture 25 Ideal Gas Law and Kinetic Theory

## Announcements

- Exam 3:

Covers Lectures 17-23 (universal gravitation, fluid statics \& dynamics, oscillations [mass at the end of springs and pendula], waves, interference and sound). Please sign up for a slot if you haven't already done so.

Review session: Monday 6-7PM in Loomis 151. Please print and bring Exam 3 from Fall 2015 (we will discuss problems 1-21) Also bring problems $4 \& 5$ from Exam 3 Fall 2016.

- Final Exam:
$\rightarrow$ About 45 questions, evenly divided among all the topics covered in the course. Will include, proportionally, material after exam 3.
$\rightarrow$ You can sign up to take either exam in the gradebook. See section headed "Upcoming Paper Exam Information".

## Molecular Picture of Gas

- Gas is made up of many individual molecules
- Number density is number of molecules/volume:
$\rightarrow \mathrm{N} / \mathrm{V}=\rho / \mathrm{m}$
$\rightarrow \rho$ is the mass density
$\rightarrow \mathrm{m}$ is the mass for one molecule

$$
1 \mathrm{u}=1.66 \times 10^{-27} \mathrm{~kg}=1 / 12 \text { of a mass of } \mathrm{C}^{12}
$$

- Number of moles: $\mathrm{n}=\mathrm{N} / \mathrm{N}_{\mathrm{A}}$
$\rightarrow \mathrm{N}_{\mathrm{A}}=$ Avogadro's Number $=6.022 \times 10^{23} \mathrm{~mole}^{-1}$
- Mass of 1 mole of "stuff" in grams = molecular mass in u
$\rightarrow$ e.g., 1 mole of $\mathrm{N}_{2}$ has mass of $2 \times 14=28$ grams

## Number Density Clicker Q

- Two identical gas cylinders are filled such that they have the same mass of gas (in the same volume). One cylinder is filled with Helium, the other with Oxygen. Which container has the larger number density (number of molecules per volume of the cylinder)?
A) Helium
B) Oxygen
C) Same

## Atomic Clicker Q I

Which contains the most molecules ?

1. A mole of water $\left(\mathrm{H}_{2} \mathrm{O}\right)$
2. A mole of oxygen gas $\left(\mathrm{O}_{2}\right)$
3. Same

## Atomic Clicker Q II

Which contains the most atoms ?

1. A mole of water $\left(\mathrm{H}_{2} \mathrm{O}\right)$
2. A mole of oxygen gas $\left(\mathrm{O}_{2}\right)$
3. Same

## Atomic Clicker Q IIII

Which weighs the most ?

1. A mole of water $\left(\mathrm{H}_{2} \mathrm{O}\right)$
2. A mole of oxygen gas $\left(\mathrm{O}_{2}\right)$
3. Same

## The Ideal Gas Law

- $\mathrm{P} V=\mathrm{Nk}_{\mathrm{B}} \mathrm{T}$ or $\mathrm{P}=(\mathrm{N} / \mathrm{V}) \mathrm{k}_{\mathrm{B}} \mathrm{T}$
$\rightarrow \mathrm{P}=$ pressure in $\mathrm{N} / \mathrm{m}^{2}$ (or Pascals)
$\rightarrow \mathrm{V}=$ volume in $\mathrm{m}^{3}$
$\rightarrow \mathrm{N}=$ number of molecules
$\rightarrow \mathrm{T}=$ absolute temperature in K
$\rightarrow \mathrm{k}_{\mathrm{B}}=$ Boltzmann's constant $=1.38 \times 10^{-23} \mathrm{~J} / \mathrm{K}$
$\rightarrow$ Note: P V has units of $\mathrm{N}-\mathrm{m}$ or $\mathbf{J}$ (energy!)
- $\mathrm{P} V=\mathrm{n}$ R T (get this by multiplying top eqn by $\mathrm{N}_{\mathrm{A}} / \mathrm{N}_{\mathrm{A}}$ )
$\rightarrow \mathrm{n}=$ number of moles
$\rightarrow \mathrm{R}=$ ideal gas constant $=\mathrm{N}_{\mathrm{A}} \mathrm{k}_{\mathrm{B}}=8.31 \mathrm{~J} / \mathrm{mol} / \mathrm{K}$

## Checkpoint 2

Two monatomic gases, helium and neon, are mixed and in thermal equilibrium at temperature T. Therefore,
A) The helium atoms have the same average translational kinetic energy as the neon atoms.
B) Each atom has a different average translational kinetic energy.
C) There is a difference of $3 / 2 \mathrm{kT}$ in the average translational kinetic energy between helium atoms and neon atoms.

## Ideal Gas Law Clicker I $\mathbf{P V}=\mathbf{n R T}$

You inflate the tires of your car so the pressure is 30 psi , when the air inside the tires is at 20 degrees C. After driving on the highway for a while, the air inside the tires heats up to 38 C . Which number is closest to the new air pressure?

DEMO: Air-molecules

1) 16 psi
2) 32 psi
3) 57 psi

## Ideal Gas Law: Clicker III $\mathrm{p} V=\mathbf{n R T}$

- A piston has volume 20 ml , and pressure of 30 psi. If the volume is decreased to 10 ml , what is the new pressure? (Assume T is constant.)
$\begin{array}{lll}\text { 1) } 60 & \text { 2) } 30 & \text { 3) } 15\end{array}$
DEMO: Boyle's Law

## Balloon Clicker 1

- What happens to the pressure of the air inside a hot-air balloon when the air is heated? (Assume V is constant)

1) Increases 2) Same 3) Decreases

## Balloon Clicker 2

- What happens to the buoyant force on the balloon when the air is heated? (Assume V remains constant)

1) Increases 2) Same 3) Decreases

## Balloon Clicker 3

- What happens to the number of air molecules inside the balloon when the air is heated? (Assume V remains constant)

1) Increases 2) Same 3) Decreases

DEMO

## Ideal Gas Law: Demos $\mathbf{p V}=\mathbf{n} \mathbf{R} T$

- When T is constant, PV is constant (Boyle's Law)
$\rightarrow$ Boyle's law demo (Done earlier)
- When P is constant, V is proportional to T $\rightarrow$ Helium and oxygen in $\mathrm{LN}_{2} \quad$ (Balloon in $\mathrm{LN}_{2}$ )
- When V is constant, P is proportional to T $\rightarrow$ Explosion! (Cannon DEMO)

## Summary

- Gas is made up of molecules
- Ideal Gas Law PV = n R T
$\rightarrow \mathrm{P}=$ pressure in $\mathrm{N} / \mathrm{m}^{2}$ (or Pascals)
$\rightarrow \mathrm{V}=$ volume in $\mathrm{m}^{3}$
$\rightarrow \mathrm{n}=\#$ moles
$\rightarrow \mathrm{R}=8.31 \mathrm{~J} /$ (K mole)
$\rightarrow \mathrm{T}=$ Temperature $(\mathrm{K})$
