Instructions—

Turn off your cell phone and put it away.
Calculators may not be shared. Please keep your calculator on your own desk.
This is a closed book exam. You have ninety (90) minutes to complete it.

1. Use a #2 pencil; do not use a pen. Fill in completely (until there is no white space visible) the circle for each intended input – both on the identification side of your answer sheet and on the side on which you mark your answers. If you decide to change an answer, erase vigorously; the scanner sometimes registers incompletely erased marks as intended answers; this can adversely affect your grade. Light marks or marks extending outside the circle may be read improperly by the scanner.

2. Print your last name in the YOUR LAST NAME boxes on your answer sheet and print the first letter of your first name in the FIRST NAME INI box. Mark (as described above) the corresponding circle below each of these letters.

3. Print your NetID in the NETWORK ID boxes, and then mark the corresponding circle below each of the letters or numerals. Note that there are different circles for the letter “I” and the numeral “1” and for the letter “O” and the numeral “0”. Do not mark the hyphen circle at the bottom of any of these columns.

4. This Exam Booklet is Version A. Mark the A circle in the TEST FORM box at the bottom of the front side of your answer sheet.

5. Stop now and double-check that you have bubbled-in all the information requested in 2 through 4 above and that your marks meet the criteria in 1 above. Check that you do not have more than one circle marked in any of the columns.

6. Do not write in or mark any of the circles in the STUDENT NUMBER or SECTION boxes. Do NOT write on the Formula Sheet.

7. On the SECTION line, print your DISCUSSION SECTION. (You need not fill in the COURSE or INSTRUCTOR lines.)

8. Do not leave the answer side of the answer sheet exposed on your desk; protect your solutions from the eyes of other students.

9. Sign (DO NOT PRINT) your name on the STUDENT SIGNATURE line.

Before starting work, check to make sure that your test booklet is complete. You should have 13 numbered pages plus two Formula Sheets.

Academic Integrity—Giving assistance to or receiving assistance from another student or using unauthorized materials during a University Examination can be grounds for disciplinary action, up to and including dismissal from the University.
Exam Grading Policy—
The exam is worth a total of 114 points, and is composed of three types of questions:

**MC5:** multiple-choice-five-answer questions, each worth 6 points.
*Partial credit will be granted as follows.*
(a) If you mark only one answer and it is the correct answer, you earn 6 points.
(b) If you mark two answers, one of which is the correct answer, you earn 3 points.
(c) If you mark three answers, one of which is the correct answer, you earn 2 points.
(d) If you mark no answers, or more than three, you earn 0 points.

**MC3:** multiple-choice-three-answer questions, each worth 3 points.
*No partial credit.*
(a) If you mark only one answer and it is the correct answer, you earn 3 points.
(b) If you mark a wrong answer or no answers, you earn 0 points.

**TF:** true-false questions, each worth 2 points.
*No partial credit.*
(a) If you mark only one answer and it is the correct answer, you earn 2 points.
(b) If you mark the wrong answer or neither answer, you earn 0 points.

Unless told otherwise, you should assume that the acceleration of gravity near the surface of the earth is 9.8 m/s² downward and ignore any effects due to air resistance.

Choose the closest number to the correct answer when a numerical answer is required.

Assume that a pendulum is near the earth’s surface.
The following 2 questions concern related physical situations:

1. A sound wave of frequency \( f \) travels from water (speed of sound is 1500 m/s) to steel (speed of sound is 5600 m/s). What is the ratio of the wavelength of this sound in water \( \lambda_{\text{water}} \) to that in steel \( \lambda_{\text{steel}} \)?

   a. \( \frac{\lambda_{\text{steel}}}{\lambda_{\text{water}}} = 0.25 \).
   b. \( \frac{\lambda_{\text{steel}}}{\lambda_{\text{water}}} = 0.73 \).
   c. \( \frac{\lambda_{\text{steel}}}{\lambda_{\text{water}}} = 1.00 \).
   d. \( \frac{\lambda_{\text{steel}}}{\lambda_{\text{water}}} = 2.53 \).
   e. \( \frac{\lambda_{\text{steel}}}{\lambda_{\text{water}}} = 3.73 \).

2. \( \lambda_{\text{steel}} \) is 35 cm for this sound. What is the frequency of the sound?

   a. \( f = 7 \text{ kHz} \).
   b. \( f = 12 \text{ kHz} \).
   c. \( f = 16 \text{ kHz} \).
   d. \( f = 19 \text{ kHz} \).
   e. \( f = 21 \text{ kHz} \).

3. A uniform string is stretched between a transducer and a smooth peg. The string is stretched by a hanging block of mass \( M \). The distance between the transducer and the peg is a fixed distance, \( L \).

![String Diagram]

The number of nodes in the above figure is 4 (including both ends). We now change the block of mass \( M \) to another block of mass \( m \), while keeping the frequency of the transducer the same. This produces a standing wave with 3 nodes on the string (including both ends). What is the required mass \( m \) of the new block?

   a. \( m = 9M/4 \).
   b. \( m = 7M/4 \).
   c. \( m = 3M/2 \).
   d. \( m = 5M/4 \).
   e. \( m = 3M/4 \).
The following 2 questions concern related physical situations:

A siren gives a loudness $\beta$, when it is 7 m away and $\beta_o$ when it is 9 m away.

4. Find the difference $\beta_7 - \beta_9$.
   
a. $\beta_7 - \beta_9 = 0.98$ dB.
   b. $\beta_7 - \beta_9 = 1.58$ dB.
   c. $\beta_7 - \beta_9 = 2.18$ dB.

5. A single siren 9 meters away makes a sound of loudness $\beta_9$. What is the loudness, $\beta$ of 3 sirens, identical to the first one, placed at the same location?
   
a. $\beta = \beta_9 + 4.8$.
   b. $\beta = 3 \beta_9$.
   c. $\beta = 4.8 \beta_9$.

6. You drive a car at a constant speed along a road. On the roadside is a stationary siren whose frequency observed by a bystander is $f_0$. When you are approaching the siren, you hear the frequency $f_b = 740$ Hz and when you are leaving the siren, you hear the frequency $f_a = 690$ Hz. Assume that the speed of sound is 330 m/s. What is the frequency $f_0$ of the siren?
   
a. 671 Hz
   b. 690 Hz
   c. 702 Hz
   d. 715 Hz
   e. 740 Hz

7. On a 1 m square plate is a hole of area $A = 0.3$ m$^2$ at $T = 200$ K. The plate is made of a material whose linear thermal expansion coefficient is $\alpha = 13 \times 10^{-6}$ K$^{-1}$. What is the increase $\Delta A$ of the area of the window at $T = 300$ K compared with that at $T = 200$ K?
   
a. $\Delta A = 5.3 \times 10^{-4}$ m$^2$
   b. $\Delta A = 7.8 \times 10^{-4}$ m$^2$
   c. $\Delta A = 9.3 \times 10^{-4}$ m$^2$
   d. $\Delta A = 11.2 \times 10^{-4}$ m$^2$
   e. $\Delta A = 13.5 \times 10^{-4}$ m$^2$
The following two questions concern related physical situations:

In a container of volume $V = 0.5 \text{ m}^3$ is 0.8 kg of an ideal gas. Its pressure is $P = 1.25 \times 10^5 \text{ Pa}$ at temperature $T = 290 \text{ K}$.

8. What is the molecular mass $M$ of the molecules making the gas?
   a. $M = 22.3 \text{ amu}$
   b. $M = 30.8 \text{ amu}$
   c. $M = 33.5 \text{ amu}$
   d. $M = 41.1 \text{ amu}$
   e. $M = 49.0 \text{ amu}$

9. What is the ratio of the root mean square velocity $v_{290}$ of the molecules at $T = 290 \text{ K}$, and that $v_{580}$ at $T = 580 \text{ K}$?
   a. $v_{580}/v_{290} = 1.21$
   b. $v_{580}/v_{290} = 1.31$
   c. $v_{580}/v_{290} = 1.41$
   d. $v_{580}/v_{290} = 1.71$
   e. $v_{580}/v_{290} = 2.00$
The following 4 questions concern the same physical situation:

An object of mass $m$ is hanging from a vertical spring of spring constant $k (= 20 \text{ N/m})$ near the surface of the earth. In equilibrium, the spring is stretched by 10 cm relative to the relaxed length of the spring. The spring is then compressed by 1 cm relative to the equilibrium position and is released into oscillation at time $t = 0$. The height of the object relative to the equilibrium height oscillates as shown below as a function of time.

10. Among the three time points marked (A, B, and C), when is the speed of the object the greatest?
   a. A  
   b. B  
   c. C

11. Between the two time points marked (A and B), when is the acceleration of the object the largest in magnitude?
   a. A  
   b. B
The next two questions refer to the previous page.

12. What is the mass m of the object?

a. 0.10 kg
b. 0.15 kg
c. 0.20 kg

13. Which of the following curves would best describe the height vs. time curve, if the mass of the object is quadrupled with all other quantities remaining the same?

a. A  
  b. B  
  c. C  
  d. D  
  e. E
**The next 2 questions concern the following situation:**

A pendulum hanging from the ceiling of an elevator is swinging with the period of 2 seconds when the elevator is at rest. Assume that the elevator is near the surface of the earth. Suddenly, the elevator undergoes vertical acceleration and the period of the pendulum has changed to 2.2 seconds.

14. What is the direction of acceleration?
   a. Upward
   b. Downward

15. What is the magnitude of acceleration?
   a. 1.4 m/s²
   b. 1.7 m/s²
   c. 2.0 m/s²
   d. 2.3 m/s²
   e. 2.6 m/s²

**The next 2 questions concern the following situation.**

A container is filled with water to the brim and a uniform block of unknown density is added to the container. The block floats with 75% of its volume immersed in water and the amount of water overflowed from the container is 1 liter (1 liter is $10^{-3}$ m³). Assume that the mass density of water is 1,000 kg/m³.

16. What is the mass density of the unknown material?
   a. 1,250 kg/m³
   b. 1,100 kg/m³
   c. 900 kg/m³
   d. 750 kg/m³
   e. 600 kg/m³

17. What is the weight of the block?
   a. 9.8 N
   b. 11.2 N
   c. 12.5 N
   d. 15.7 N
   e. 18.2 N
The next two questions concern the following situation.

A pendulum is made of a small weight of mass 1.5 kg attached to a string of length 2 m. The mass is released gently with the initial angle displacement of 5 degrees.

18. How long does it take for the mass to reach its lowest point for the first time?

a. 2.84 s  
b. 1.42 s  
c. 0.71 s

19. What is the maximum kinetic energy of the pendulum?

a. 0.33 J  
b. 0.22 J  
c. 0.11 J
The next two questions concern the following situation.

An incompressible and non-viscous fluid flows from left to right through a circular pipe that changes its radius from \( r_1 \) to \( r_2 \) between regions 1 and 2 (see figure above, not to scale). The fluidic velocity in region 1 is \( v_1 (=3 \text{ m/s}) \) and the fluidic velocity in region 2 is \( v_2 (=9 \text{ m/s}) \). The density of fluid is 1,300 kg/m\(^3\).

20. What is the ratio between \( r_2 \) and \( r_1 \)?
   a. \( r_2/r_1=0.58 \)
   b. \( r_2/r_1=0.44 \)
   c. \( r_2/r_1=0.33 \)

21. What is the magnitude of the pressure difference between the two regions?
   a. \( |P_2-P_1| = 24,500 \text{ Pa} \)
   b. \( |P_2-P_1| = 35,300 \text{ Pa} \)
   c. \( |P_2-P_1| = 46,800 \text{ Pa} \)
   d. \( |P_2-P_1| = 57,900 \text{ Pa} \)
   e. \( |P_2-P_1| = 0 \text{ Pa} \)
22. Yuri constructs a barometer as shown below using water as the fluid in order to measure the atmospheric pressure. He takes it to the top of a mountain. The column of water reaches the height $h$ of 9.18 m. The water density is 1,000 kg/m$^3$.

What is the atmospheric pressure measured by the barometer?

a. 115,000 Pa  
b. 105,000 Pa  
c. 95,000 Pa  
d. 90,000 Pa  
e. 80,000 Pa
23. A horizontal pipe becomes narrow and then widens as the fluid inside flows to the right as shown below.

Which of the following statements is true?

a. The pressure of the fluid is everywhere the same because the average height of the fluid is the same everywhere the same.

b. The pressure of the fluid is smallest on the right end of the pipe because its diameter is the largest.

c. The pressure of the fluid is the smallest in the narrowed section because the velocity is the largest there.

d. The pressure of the fluid is the largest in the narrowed section because the velocity is the largest there.

e. None of the above statements is true.

24. When you blew on a pipe to make some sound, one end was open. Despite this, there was some reflection between the open end of the instrument and the surrounding air.

a. True

b. False
25. You blow into a pipe and record the output. The pressure variation as a function of
time looks like:

You then blow into another pipe and the output sound is lower in pitch. Which of the
following is a possible pressure variation recorded just outside the pipe as a function of
time?
A. 
B. 
C. 

Check to make sure you bubbled in all your answers.
Did you bubble in your name, exam version and network-ID?
