

Chapter 5 Part II – 3-D Rigid Body

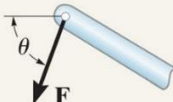

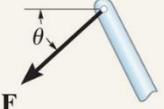

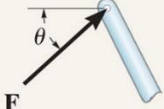

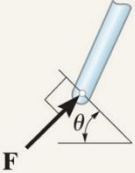

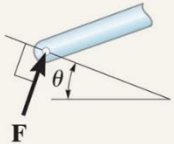

Equilibrium of a rigid body

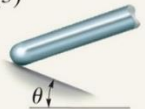

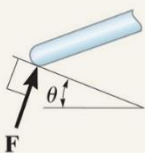

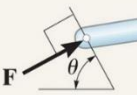

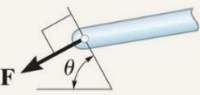

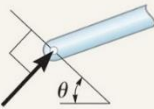

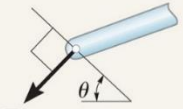

Now we add the z-axis to the coordinate system!

6 Equations of Equilibriums:

Types of 2D connectors

Types of Connection	Reaction
(1)  cable	
(2)  weightless link	 or 
(3)  roller	
(4)  rocker	

Types of Connection	Reaction
(5)  smooth contacting surface	
(6)  roller or pin in confined smooth slot	 or 
(7)  member pin connected to collar on smooth rod	 or 

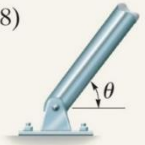

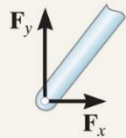

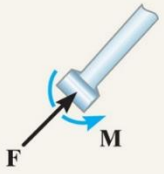

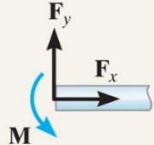

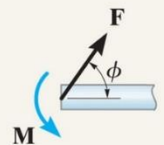

(8)  smooth pin or hinge	 or 
(9)  member fixed connected to collar on smooth rod	
(10)  fixed support	 or 

TABLE 5-2 Supports for Rigid Bodies Subjected to Three-Dimensional Force Systems

Types of Connection	Reaction	Number of Unknowns
<p>(1)</p>  <p>cable</p>		
<p>(2)</p>  <p>smooth surface support</p>		
<p>(3)</p>  <p>roller</p>		

TABLE 5-2 Supports for Rigid Bodies Subjected to Three-Dimensional Force Systems

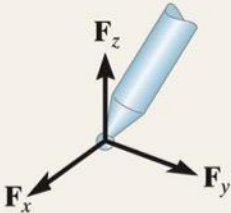

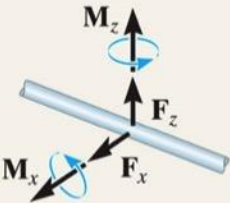

Types of Connection	Reaction	Number of Unknowns
<p>(4)</p>  <p>ball and socket</p>		
<p>(5)</p>  <p>single journal bearing</p>		

TABLE 5-2 Continued

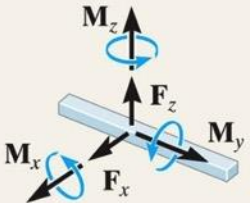

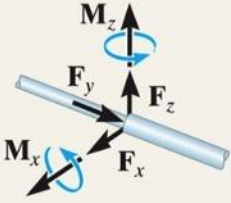

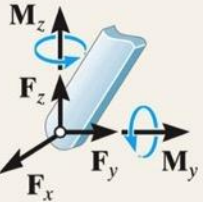

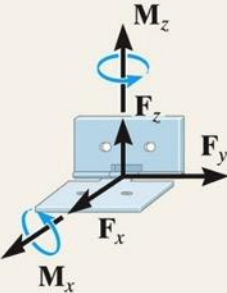

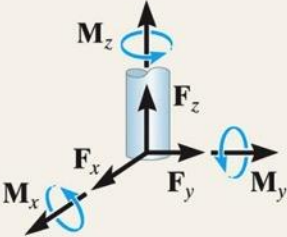

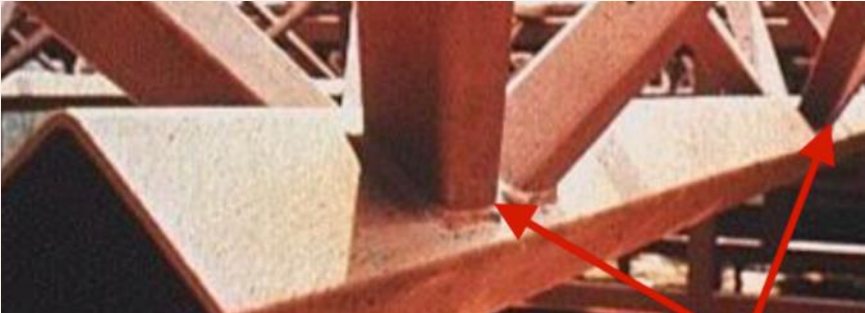

Types of Connection	Reaction	Number of Unknowns
<p>(6)</p>  <p>single journal bearing with square shaft</p>		
<p>(7)</p>  <p>single thrust bearing</p>		
<p>(8)</p>  <p>single smooth pin</p>		

TABLE 5-2 Continued

Types of Connection	Reaction	Number of Unknowns
<p>(9)</p>  <p>single hinge</p>		
<p>(10)</p>  <p>fixed support</p>		

Given: The rod, supported by thrust bearing at A and cable BC, is subjected to an 80 lb force.

Find: Reactions at the thrust bearing A and cable BC.

The 100 lb door has its center of gravity at G . Determine the components of reaction at hinges A and B if hinge B resists only forces in the x and y directions and A resists forces in the x , y , z directions.

If these components have weights $W_A = 45000$ lb, $W_B = 8000$ lb and $W_C = 6000$ lb, determine the normal reactions of the wheels D , E , and F on the ground.

Calculate the reaction forces and moments at the support
