### Announcements

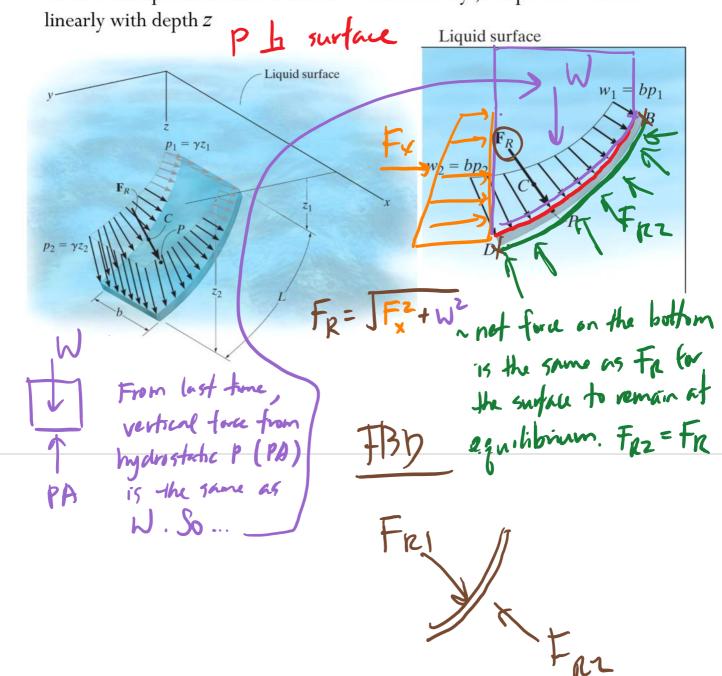

- CBTF Quiz 7 this week!
- Last day of office hours and Piazza help: Wed, Dec. 13

- ☐ Upcoming deadlines:
- Tuesday (12/5)
  - PL HW24
- Saturday (12/9)
  - ME HW27

## Recap: Fluid Pressure

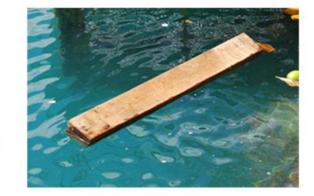

For an incompressible fluid at rest with mass density , the pressure varies

When a rectangular block of wood of cross sectional area A, height h, and mass m is placed in a lake. How far below the surface z is the bottom of

the block? ( $\rho_{\text{water}} = 1 \text{ Mg/m}^3$ )

What happens when you replace the block of wood with block of steel?

## Chapter 11: Virtual Work Main goals and learning objectives

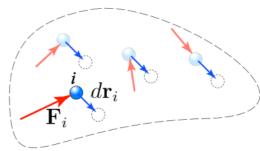

- Introduce the principle of virtual work
- Show how it applies to determining the equilibrium configuration of a series of pin-connected members

# Definition of Work (ひ)

#### Work of a force

A force does work when it undergoes a displacement in the direction of the line of action.

The work dU produced by the force  ${\pmb F}$  when it undergoes a differential displacement  $d{\pmb r}$  is given by

$$\frac{dU = \mathbf{F} \cdot d\mathbf{r}}{F} = F \cos \theta \, d\mathbf{r}$$

$$\frac{dV}{F} = F \cdot d\mathbf{r}$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}{2} \left( \frac{1}{2} \cos \theta \right) \cos \theta$$

$$\frac{dV}{F} = \frac{1}$$

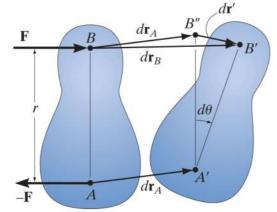

- only FIIx does work.

Advantage: only consider forces that do work in analysis.

## **Definition of Work**

Work of a couple  $dU = M\mathbf{k} \cdot d\theta \,\mathbf{k} = M \,d\theta$ 

Since F and dry have same direction, F does positive work.

-F & dry have opposition directions,
so -F does negative work here.
Hence, not work done by force couple due to translate is zero.
